KTQ67/ATXE

KTQ67 Users Guide

KTD-N0829-D

Document revision history.

Revision	Date	By	Comment
D	Jul. 4 th 2012	MLA	Corrected qm67 reference to Q67. Update of OS support. Added PCI Flexible Riser support. Modified SATA_LED# description. Added USB port/EHCI relation. Added BIOS info and normal beep info.
C	Jan 2 nd 2012	MLA	Processor list updated. LPT removed. Added KTQ67/ATXE pictures and related info. Added cooling info. Added SPI connector correction and description.
B	Nov. 9 th 2011	MLA	Added Power consumptions. Corrected GPIO8-12. Battery type no. replaced. Minor updated info.
A	Sept. 8 th 2011	MLA	Preliminary version. Corrections. LVDS optionally.
0	Aug 26 th 2011	MLA	Preliminary version

No part of this document may be reproduced or transmitted in any form or by any means, electronically or mechanically, for any purpose, without the express written permission of KONTRON Technology A/S.

Trademark Acknowledgement:

Brand and product names are trademarks or registered trademarks of their respective owners.

Disclaimer:

KONTRON Technology A/S reserves the right to make changes, without notice, to any product, including circuits and/or software described or contained in this manual in order to improve design and/or performance.

Specifications listed in this manual are subject to change without notice. KONTRON Technology assumes no responsibility or liability for the use of the described product(s), conveys no license or title under any patent, copyright, or mask work rights to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified. Applications that are described in this manual are for illustration purposes only. KONTRON Technology A/S makes no representation or warranty that such application will be suitable for the specified use without further testing or modification.

Life Support Policy

KONTRON Technology's PRODUCTS ARE NOT FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT EXPRESS WRITTEN APPROVAL OF THE GENERAL MANAGER OF KONTRON Technology A/S.

As used herein:

Life support devices or systems are devices or systems which, (a) are intended for surgical implant into body, or (b) support or sustain life and whose failure to perform, when properly used in accordance with instructions for use provided in the labelling, can be reasonably expected to result in significant injury to the user.

A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

KONTRON Technology Technical Support & Services

If you have questions about installing or using your KONTRON Technology Product, check this User's Manual first – you will find answers to most questions here. To obtain support, please contact your local Distributor or Field Application Engineer (FAE).

Before Contacting Support: Please be prepared to provide as much information as possible:

- CPU Board
 1. Type.
 2. Part Number (find PN on label)
 3. Serial Number if available (find SN on label)
- Configuration
 1. CPU Type, Clock speed
 2. DRAM Type and Size.
 3. BIOS Revision (Find the Version Info in the BIOS Setup).
 4. BIOS Settings different than *Default* Settings (Refer to the BIOS Setup Section).
- System
 1. O/S Make and Version.
 2. Driver Version numbers (Graphics, Network, and Audio).
 3. Attached Hardware: Harddisks, CD-rom, LCD Panels etc.

Warranty

KONTRON Technology warrants its products to be free from defects in material and workmanship during the warranty period. If a product proves to be defective in material or workmanship during the warranty period, KONTRON Technology will, at its sole option, repair or replace the product with a similar product.

Replacement Product or parts may include remanufactured or refurbished parts or components.

The warranty does not cover:

1. Damage, deterioration or malfunction resulting from:
 - A. Accident, misuse, neglect, fire, water, lightning, or other acts of nature, unauthorized product modification, or failure to follow instructions supplied with the product.
 - B. Repair or attempted repair by anyone not authorized by KONTRON Technology.
 - C. Causes external to the product, such as electric power fluctuations or failure.
 - D. Normal wear and tear.
 - E. Any other causes which does not relate to a product defect.
2. Removal, installation, and set-up service charges.

Exclusion of damages:

KONTRON TECHNOLOGY LIABILITY IS LIMITED TO THE COST OF REPAIR OR REPLACEMENT OF THE PRODUCT. KONTRON TECHNOLOGY SHALL NOT BE LIABLE FOR:

1. DAMAGE TO OTHER PROPERTY CAUSED BY ANY DEFECTS IN THE PRODUCT, DAMAGES BASED UPON INCONVENIENCE, LOSS OF USE OF THE PRODUCT, LOSS OF TIME, LOSS OF PROFITS, LOSS OF BUSINESS OPPORTUNITY, LOSS OF GOODWILL, INTERFERENCE WITH BUSINESS RELATIONSHIPS, OR OTHER COMMERCIAL LOSS, EVEN IF ADVISED OF THEIR POSSIBILITY OF SUCH DAMAGES.
2. ANY OTHER DAMAGES, WHETHER INCIDENTAL, CONSEQUENTIAL OR OTHERWISE.
3. ANY CLAIM AGAINST THE CUSTOMER BY ANY OTHER PARTY.

Introduction

This manual describes the KTQ67/Flex and KTQ67/ATXE boards made by KONTRON Technology A/S. The boards will also be denoted KTQ67 family if no differentiation is required.

The KTQ67 boards, all based on the Q67 chipset, support 2nd generation Intel® i7 -, i5 -, i3 2Core and 4Core processor and the Celeron B810 2Core, see “Processor Support Table for more specific details.

The KTQ67 family consist on members having different form factors, and the same functionality except for the functions listed in the table below.

KTQ67 variants	Format	PCI	LPT	LVDS
KTQ67/Flex	Flex	2	-	-
KTQ67/ATXE	ATX	5	-	-

Note. LPT and LVDS is optionally for future variants. LPT and LVDS connectors can be found on some EFT samples, but is unsupported.

Use of this Users Guide implies a basic knowledge of PC-AT hard- and software. This manual is focused on describing the KTQ67 board’s special features and is not intended to be a standard PC-AT textbook.

New users are recommended to study the short installation procedure stated in the following chapter before switching-on the power.

All configuration and setup of the CPU board is either done automatically or manually by the user via the CMOS setup menus. Only exception is the Clear CMOS jumper.

1 Installation procedure

1.1 Installing the board

To get the board running, follow these steps. If the board shipped from KONTRON has already components like DRAM, CPU and cooler mounted, then relevant steps below, can be skipped.

1. Turn off the PSU (Power Supply Unit)

Warning: Turn off PSU (Power Supply Unit) completely (no mains power connected to the PSU) or leave the Power Connectors unconnected while configuring the board. Otherwise components (DRAM, LAN cards etc.) might get damaged. Make sure PSU has 3.3V monitoring watchdog (standard ATX PSU feature), running the board without 3.3V will damage the board within minutes.

2. Insert the DRAM(s) (UDIMM 240pin)

Be careful to push it in the slot(s) before locking the tabs. For a list of approved DRAM contact your Distributor or FAE. See also chapter "System Memory Support".

3. Install the processor

The CPU is keyed and will only mount in the CPU socket in one way. Use finger to open/ close the CPU socket. Refer to supported processor overview for details.

4. Cooler Installation

Use heat paste or adhesive pads between CPU and cooler and connect the Fan electrically to the FAN_CPU connector.

5. Connecting Interfaces

Insert all external cables for hard disk, keyboard etc. A monitor must be connected in order to be able change CMOS settings.

6. Connect and turn on PSU

Connect PSU to the board by the ATX/BTXPWR and the 4-pin ATX+12V connectors.

7. Power Button

The PWRBTN_IN must be toggled to start the Power supply; this is done by shorting pins 16 (PWRBTN_IN) and pin 18 (GND) on the FRONTPNL connector (see Connector description). A "normally open" switch can be connected via the FRONTPNL connector.

8. BIOS Setup

Enter the BIOS setup by pressing the key during boot up.

Enter Exit Menu and Load Optimal Defaults.

Refer to the "BIOS Configuration / Setup" section of this manual for details on BIOS setup.

Note: To clear all CMOS settings, including Password protection, move the Clear CMOS jumper in the Clear CMOS position (with or without power) for ~10 sec. This will Load Failsafe Defaults and make sure Secure CMOS is disabled.

9. Mounting the board to chassis

Warning: When mounting the board to chassis etc. please notice that the board contains components on both sides of the PCB which can easily be damaged if board is handled without reasonable care. A damaged component can result in malfunction or no function at all.

When fixing the Motherboard on a chassis it is recommended using screws with integrated washer and having diameter of ~7mm.

Note: Do not use washers with teeth, as they can damage the PCB and may cause short circuits.

1.2 Requirement according to IEC60950

Users of KTQ67 family boards should take care when designing chassis interface connectors in order to fulfil the IEC60950 standard:

When an interface/connector has a VCC (or other power) pin, which is directly connected to a power plane like the VCC plane:

To protect the external power lines of the peripheral devices, the customer has to take care about:

- That the wires have suitable rating to withstand the maximum available power.
- That the enclosure of the peripheral device fulfils the fire protecting requirements of IEC60950.

Lithium Battery precautions:

<p style="text-align: center;">CAUTION!</p> <p>Danger of explosion if battery is incorrectly replaced.</p> <p>Replace only with same or equivalent type recommended by manufacturer. Dispose of used batteries according to the manufacturer's instructions.</p>	<p style="text-align: center;">VORSICHT!</p> <p>Explosionsgefahr bei unsachgemäßem Austausch der Batterie.</p> <p>Ersatz nur durch den selben oder einen vom Hersteller empfohlenen gleichwertigen Typ. Entsorgung gebrauchter Batterien nach Angaben des Herstellers.</p>
<p style="text-align: center;">ADVARSEL!</p> <p>Lithiumbatteri – Explosionsfare ved fejlagtig håndtering. Udskiftning må kun ske med batteri af samme fabrikat og type. Levér det brugte batteri tilbage til leverandøren.</p>	<p style="text-align: center;">ADVARSEL</p> <p>Ekspløsjonsfare ved feilaktig skifte av batteri. Benytt samme batteritype eller en tilsvarende type anbefalt av apparatfabrikanten. Brukte batterier kasseres i henhold til fabrikantens instruksjoner.</p>
<p style="text-align: center;">VARNING</p> <p>Explosionsfara vid felaktigt batteribyte. Använd samma batterityp eller en ekvivalent typ som rekommenderas av apparattillverkaren. Kassera använt batteri enligt fabrikantens instruktion.</p>	<p style="text-align: center;">VAROITUS</p> <p>Paristo voi räjähtää, jos se on virheellisesti asennettu. Vaihda paristo ainoastaan laltevalmistajan suositttelemaan tyyppiin. Hävitä käytetty paristo valmistajan mukaisesti.</p>

2 System Specification

2.1 Component main data

The table below summarizes the features of the KTQ67/Flex and KTQ67/ATXE embedded motherboards.

Form factor	KTQ67/Flex: Flex-ATX (190,5 mm by 228,6 mm) KTQ67/ATXE: ATX (190,5 mm by 304,8 mm)
Processor	Support the following 2nd Generation Intel® Core™ (Sandy Bridge) and Intel® Pentium® Desktop processors via Socket H2 (LGA1155), ZIF Socket <ul style="list-style-type: none"> Intel® Core™ i7 Intel® Core™ i5 Intel® Core™ i3 Intel® Pentium® Desktop 1066/1333MHz system bus and 3/6/8MB internal cache. (Intel® Pentium® Desktop G622 only 1066MHz) Up to 95W (Thermal Guideline)
Memory	<ul style="list-style-type: none"> 4x DDR3 UDIMM 240pin socket Support single and dual ranks DDR3 1066/1333MT/s (PC3-8500/PC3-10600) Support system memory from 256MB and up to 4x 8GB Note: Less than 4GB displayed in System Properties using 32bit OS (Shared Video Memory/PCI resources is subtracted) ECC not supported (chipset limitation)
Chipset	Intel Q67 PCH (Platform Controller Hub) <ul style="list-style-type: none"> Intel® VT-d (Virtualisation Technology for Directed I/O) Intel® TXT (Trusted Execution Technology) Intel® vPRO Intel® AMT (Active Management Technology) version 7 Intel® AT (Anti-Theft Technology) Intel® HD Audio Technology Intel® RST (Rapid Storage Technology) Intel® RRT (Rapid Recover Technology) SATA (Serial ATA) 6Gb/s and 3Gb/s. USB revision 2.0 PCI Express revision 2.0 ACPI 3.0b compliant Dual Display support (Dual Graphic Pipes) Blue-ray HD video playback
Security	<ul style="list-style-type: none"> Intel® Integrated TPM 1.2 support
Management	<ul style="list-style-type: none"> Intel® Active Management Technology (Intel® AMT) 7.0
Audio	Audio, 7.1 Channel High Definition Audio Codec using the VIA 1708B codec <ul style="list-style-type: none"> Line-out Line-in Surround output: SIDE, LFE, CEN, BACK and FRONT Microphone: MIC1 and MIC2 CDROM in SPDIF (electrical Interface only) On-board speaker (Electromagnetic Sound Generator like Hycom HY-05LF)

Video	<p>Intel® i3, i5 or i7 processor supports Intel® HD Graphics 2000/3000. Intel® Pentium Desktop® Processor supports Intel® HD Graphics.</p> <p>Analogue VGA and digital display ports (2x DP) via the Mobile Intel® Q67 Chipset.</p> <ul style="list-style-type: none"> • VGA (analogue panel) • DP (DisplayPorts) dual, comply with DisplayPort 1.1a specification. • LVDS panel support up to 24 bit, 2 pixels/clock and 1920x1200. • HDMI panel support via DP to HDMI Adapter Converter. • Second VGA panel support via DP to VGA Adapter Converter • Second DVI panel support via DP to DVI Adapter Converter • Dual independent pipes for Mirror and Dual independent display support • LVDS up to two pixel/clock 24 bit (optional)
I/O Control	Via ITE IT8516E Embedded Controller and Winbond W83627DHG I/O Controller (both via LPC Bus interface)
Peripheral interfaces	<ul style="list-style-type: none"> • Six USB 2.0 ports on I/O area • Eight USB 2.0 ports on internal pinrows • Four Serial ports (RS232) on internal pinrows • Two Serial ATA-600 IDE interfaces (blue) • Four Serial ATA-300 IDE interfaces (black) • RAID 0/1/5/10 support • mSATA via mSATA connector • PS/2 keyboard and mouse ports via pinrow
LAN Support	<ul style="list-style-type: none"> • 1x 10/100/1000Mbps/s LAN (ETHER1) using Intel® Lewisville 82579LM Gigabit PHY connected to Q67 supporting AMT 7.0 • 2x 10/100/1000Mbps/s LAN (ETHER2/ETHER3) using Intel® Hartwell 82574L PCI Express controllers • PXE Netboot supported. • Wake On LAN (WOL) supported
Expansion Capabilities	<ul style="list-style-type: none"> • PCI Bus routed to PCI slot(s) (PCI Local Bus Specification Revision 3.0, 33MHz) <ul style="list-style-type: none"> ○ KTQ67/Flex: 2 ○ KTQ67/ATXE: 5 • PCI-Express slot(s) (PCIe 2.0), for all KTQ67 family members: <ul style="list-style-type: none"> ○ 1 slot PCIe x16 ○ 1 slot PCIe x4 (in a x16 slot) (EFT samples support only PCIe x1) ○ 1 slot miniPCI-Express • SMBus, compatible with ACCES BUS and I2C BUS, (via Feature connector) • SPI bus routed to SPI connector • DDC Bus routed to DP connector when DP Adapters are connected • 5 x digital input, (via Feature connector) • 13 x GPIOs (General Purpose I/Os), (via Feature connector) • DAC, ADC, PWM and TIMER (Multiplexed), (via Feature connector) • WAKE UP / Interrupt Inputs (Multiplexed), (via Feature connector) • 3 Wire Bus for GPIO Expansion (up to 152 GPIOs), (via Feature connector) • 8 bit Timer output, (via Feature connector)

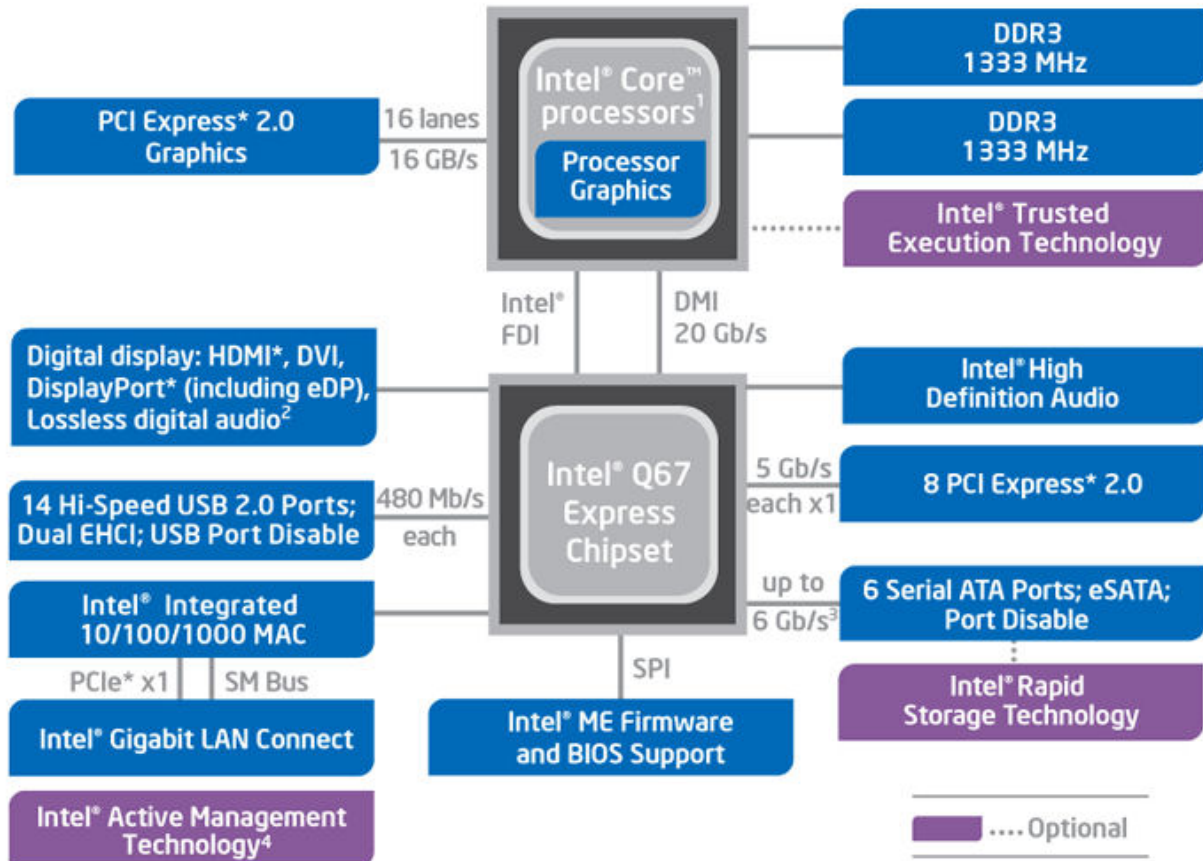

Hardware Monitor Subsystem	<ul style="list-style-type: none"> • Smart Fan control system, support Thermal® and Speed® cruise for FAN_CPU • CPU die temperature input (Precision +/- 3°C) • Voltage monitoring • Intrusion (Case Open) detect input, (via Feature connector) • Sleep S4/S5# Indication, (via Feature connector) • System Powergood Signal, (via Feature connector)
Power Supply Unit	ATX/BTX (w. ATX+12V) PSU for full PCI/PCIe load.
Battery	<p>Exchangeable 3.0V Lithium battery for on-board Real Time Clock and CMOS RAM. Manufacturer Panasonic / Part-number CR-2032L/BN, CR2032N/BN or CR-2032L/BE. Approximate 5 years retention.</p> <p>Current draw is 5,7µA when PSU is disconnected and 0 µA in S0 – S5.</p> <p>CAUTION: Danger of explosion if the battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer’s instructions.</p>
BIOS	<ul style="list-style-type: none"> • Kontron Technology / AMI BIOS (EFI core version) • Support for ACPI 3.0 (Advanced Configuration and Power Interface), Plug & Play <ul style="list-style-type: none"> ○ Suspend (S1 mode) ○ Suspend To Ram (S3 mode) ○ Suspend To Disk (S4 mode) • “Always On” BIOS power setting • RAID Support (RAID modes 0,1, 5 and 10)
Operating Systems Support	<ul style="list-style-type: none"> • WinXP (32b *) • Windows 7 (32b + 64b *) • WES7 (32b * + 64b *) • Linux Fedora * • Linux Ubuntu * • VxWorks (not ready yet) <p>*= Out Of The Box installation test only</p>

Environmental Conditions	<p>Operating: 0°C – 60°C operating temperature (forced cooling). It is the customer's responsibility to provide sufficient airflow around each of the components to keep them within allowed temperature range.</p> <p>10% - 90% relative humidity (non-condensing)</p> <p>Storage: -20°C – 70°C; lower limit of storage temperature is defined by specification restriction of on-board CR2032 battery. Board with battery has been verified for storage temperature down to -40°C by Kontron.</p> <p>5% - 95% relative humidity (non-condensing)</p> <p>Electro Static Discharge (ESD) / Radiated Emissions (EMI): (Pending) All Peripheral interfaces intended for connection to external equipment are ESD/EMI protected. ---------------------------------	--

2.2 System overview

The block diagram below shows the architecture and main components of the KTQ67. The key component on the board is the Intel® Q67 (Cougar Point) Mobile Express Chipset.

Some components (PCI/PCIe/miniPCIe slots) are optional depending on board type.

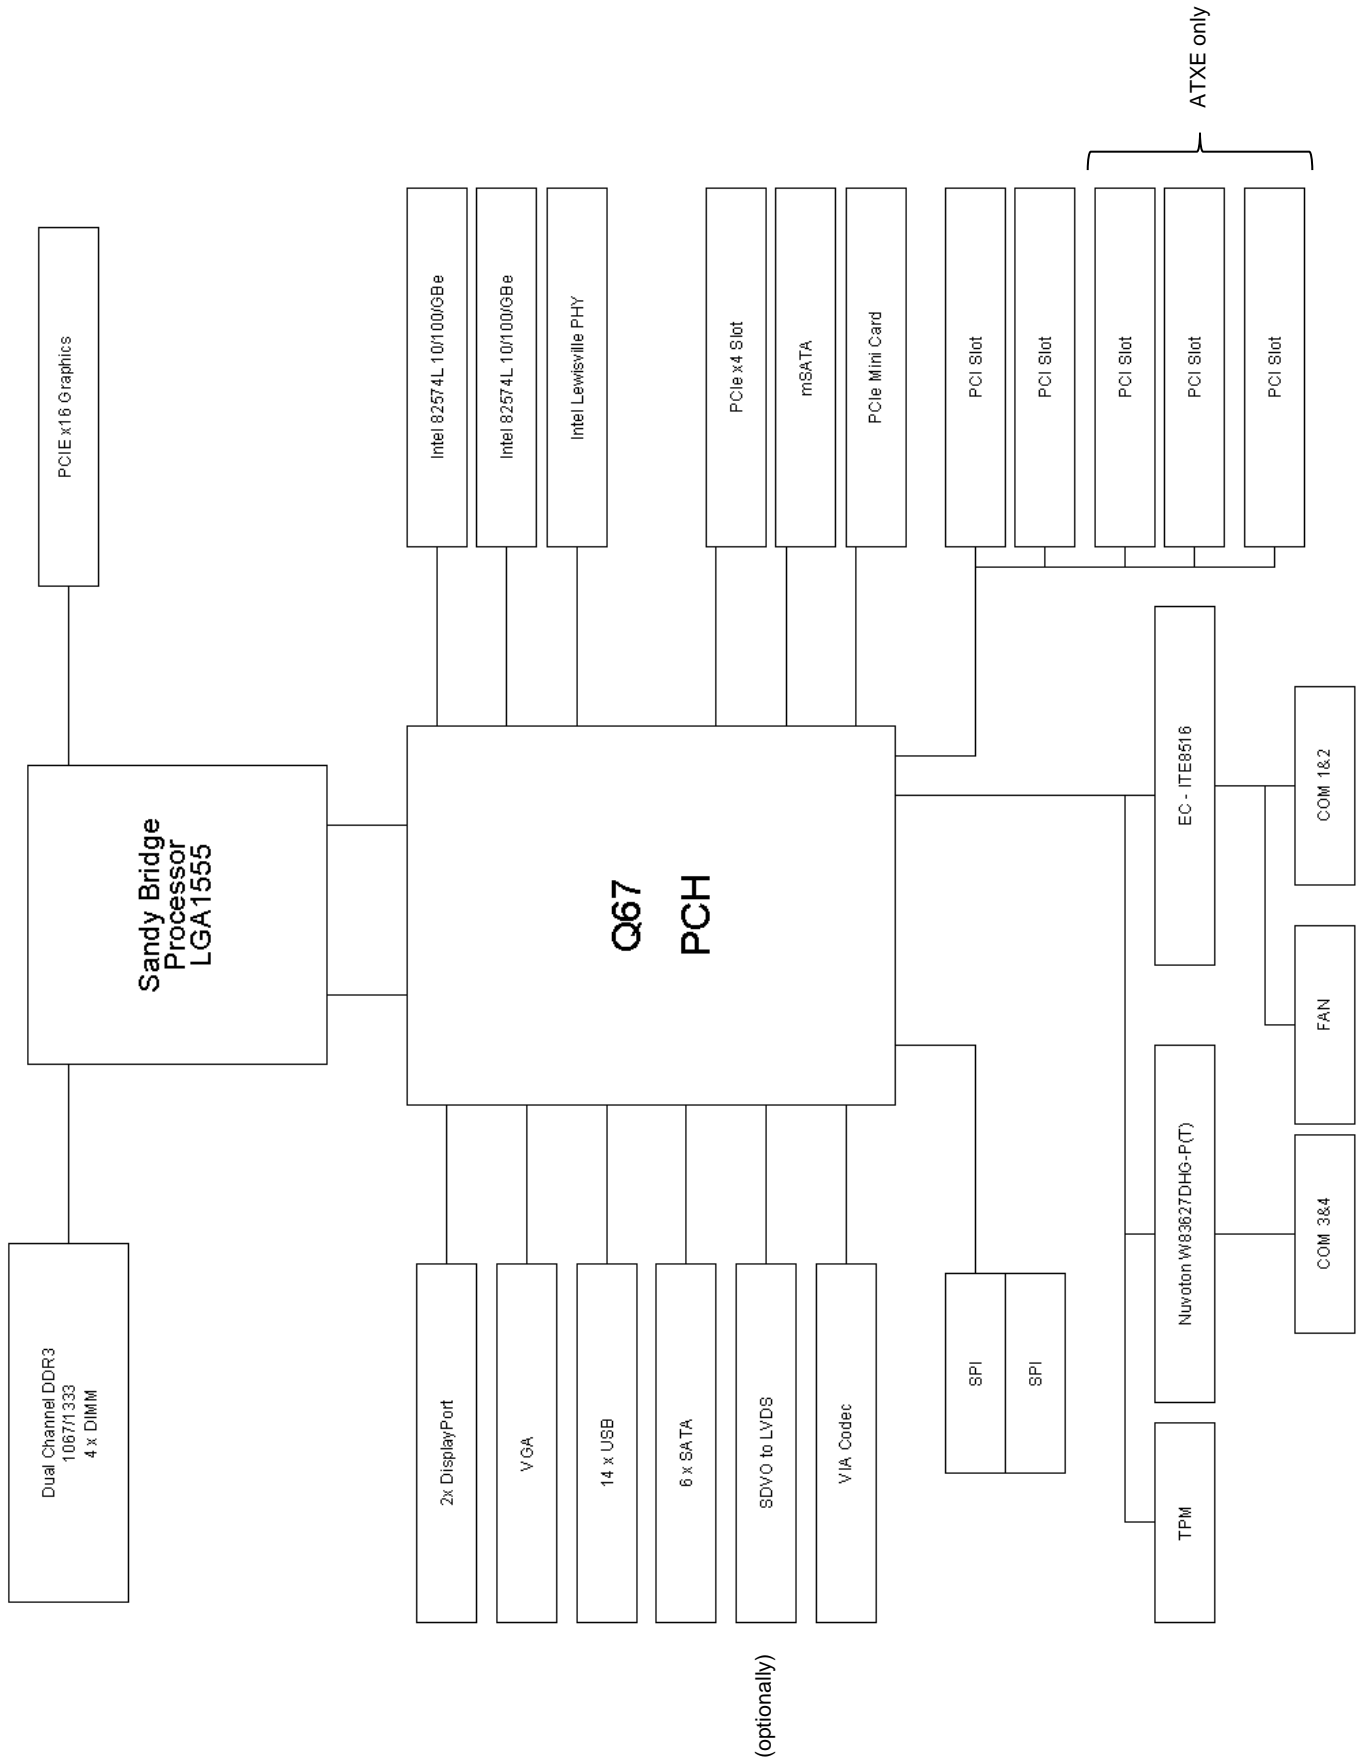

¹ 2nd generation Intel® Core™ processor family

² Available with Intel processor graphics only

³ All SATA ports capable of 3 Gb/s. 2 ports capable of 6 Gb/s.

⁴ Requires 2nd generation Intel® Core™ vPro processor

More detailed block diagram on next page.

2.3 Processor Support Table

The KTQ67 is designed to support the following LGA1155 processors (up to 95W power consumption):

2nd generation Intel® Core™ i7 processor

2nd generation Intel® Core™ i5 processor

2nd generation Intel® Core™ i3 processor

Intel® Pentium® Desktop processor

In the following list you will find all CPU's supported by the chipset in according to Intel but also other CPU's if successfully tested.

Embedded CPU's are indicated by **green** text, successfully tested CPU's are indicated by **highlighted** text, successfully tested embedded CPU's are indicated by **green and highlighted** text and failed CPU's are indicated by **red** text.

Some processors in the list are distributed from Kontron, those CPU's are marked by an * (asterisk). However please notice that this marking is only guide line and maybe not fully updated.

Not all CPU even of same type support all functions ex. i7 2600K and i5 2500K doesn't support vPro.

All the CPUs in the list above, inclusive the Pentium Desktop processors, but except G440, are supporting the Enhanced Intel® SpeedStep® which is improved SpeedStep technology for faster transition between voltage (power saving states) and frequency states with the result of improved power/performance balance.

Intel® Turbo Boost Technology 2.0 is supported by i5 and i7, as indicated in above list of processors, and is enabling overclocking of all cores, when operated within the limits of thermal design power, temperature and current.

Sufficient cooling must be applied to the CPU in order to remove the effect as listed in above table (Thermal Guideline). The sufficient cooling is also depending on the maximum (worst-case) ambient operating temperature and the actual load of processor.

Warning: Make sure sufficient airflow is always present around the components located below the cooler. Different coolers are available on the market and some is not generating any airflow or is blocking the airflow around these components, causing reduced lifetime.

It is recommended to use a cooler like the Kontron PN 1046-6305 "KTQ67 Cooler".

The design of this cooler makes sure airflow is always present around the components below the cooler. Even if Fan is set to be off, it is still running a minimum RPM (Rotation Per Minute).

Air sucked in to the cooler

Air blown out of the cooler

Note: The temperature of the air blown out of the cooler should be 70°C maximum.

2.4 System Memory support

The KTQ67/FLEX and /ATXE have four DDR3 UDIMM sockets. The sockets support the following memory features:

- 4x DDR3 1.5V UDIMM 240-pin
- Dual-channel with 2 UDIMM per channel
- Single/dual rank unbuffered 1066/1333MT/s (PC3-8500/PC3-10600)
From 256MB and up to 4x 8GB.
Note: Less than 4GB displayed in System Properties using 32bit OS
(Shared Video Memory/PCI resources is subtracted)
- SPD timings supported
- ECC not supported

The installed DDR3 DIMM should support the Serial Presence Detect (SPD) data structure. This allows the BIOS to read and configure the memory controller for optimal performance. If non-SPD memory is used, the BIOS will attempt to configure the memory settings, but performance and reliability may be impacted.

Memory Operating Frequencies

Regardless of the DIMM type used, the memory frequency will either be equal to or less than the processor system bus frequency. For example, if DDR3 1600 memory is used with a 1333 MHz system bus frequency processor, the memory clock will operate at 666 MHz. The table below lists the resulting operating memory frequencies based on the combination of DIMMs and processors.

DIMM Type	Module name	Memory Data transfers [Mill/s]	Processor system bus frequency [MHz]	Resulting memory clock frequency [MHz]	Peak transfer rate [MB/s]
DDR3 1066	PC3-8500	1066	1066 / 1333	533	8533
DDR3 1333	PC3-10600	1333	1333	666	10666
DDR3 1600	PC3-12800	1600	1333	666	10666

Notes: Kontron offers the following memory modules:

1028-6891 1GB DDR3 1066
1030-5747 2GB DDR3 1066

1030-5722 1GB DDR3 1333
1028-6892 2GB DDR3 1333
1050-3141 4GB DDR3 1333
1050-3780 8GB DDR3 1333

In order to support Intel® AMT (Management Engine) SLOT A0 **must** always be populated.

DDR3 (SLOT B1)
DDR3 (SLOT B0)
DDR3 (SLOT A1)
DDR3 (SLOT A0)

(Example Flex version)

2.5 KTQ67 Graphics Subsystem

The KTQ67 equipped with Intel® i3, i5 or i7 processor, supports Intel® HD Graphics 2000/3000. The KTQ67 equipped Intel® Pentium Desktop® Processor, supports Intel® HD Graphics.

All KTQ67 versions support analogue VGA and digital display ports (2x DP) via the Intel® Q67 Chipset. Optionally LVDS support.

The DP interface supports the DisplayPort 1.1a specification. The PCH supports High-bandwidth Digital Content Protection for high definition content playback over digital interfaces. The PCH also integrates audio codecs for audio support over DP interfaces.

Up to two displays (any two display outputs) can be activated at the same time and be used to implement dual independent display support or mirror display support. PCIe and PCI graphics cards can be used to replace on-board graphics or in combination with on-board graphics.

2.5.1 Intel® HD Graphics 3000

Features of the Intel HD Graphics 3000 build into the i3, i5 and i7 processors, includes:

- High quality graphics engine supporting
 - DirectX10.1 and OpenGL 3.0 compliant
 - Shader Model 4.1 support
 - Intel® Clear Video HD Technology
 - Intel® Quick Sync Video Technology
 - Intel® Flexible Display Interface (Intel® FDI)
 - Core frequency of 350 - 1300 (Turbo) MHz
 - Memory Bandwidth up to 21.3 GB/s
 - 12 3D Execution Units
 - 1.62 GP/s and 2.7 GP/S pixel rate (DP outputs)
 - Hardware Acceleration full MPEG2, full VC-1 and full AVC
 - Dynamic Video Memory Technology (DVMT) support up to 1720 MB
- LVDS panel Support (optional), 18/24 bit colours in up to WUXGA (1920x1200) @60 Hz and SPWG (VESA) colour coding. OpenLDI (JEIDA) colour coding is 18 bit with or without Dithering.
- DP0 and DP1
 - 24/30 bit colours in WQXGA (2560x1600 pixels) and HDCP.

Use of DP Adapter Converters can implement HDMI support or second VGA or DVI panel support.

The HDMI interface supports the HDMI 1.4a specification and includes audio codecs. However limitations to the resolution apply:
2048x1536 VGA
1920x1200 HDMI and DVI

DP to VGA DP to HDMI DP to DVI-D
PN 1045-5779 PN 1045-5781 PN 1045-5780

2.6 Power Consumption

In order to ensure safe operation of the board, the ATX12V power supply must monitor the supply voltage and shut down if the supplies are out of range – refer to the hardware manual for the actual power supply specification. The KTQ67 board is powered through the ATX/BTX connector and ATX+12V connector. Both connectors must be used in according to the ATX12V PSU standard.

The requirements to the supply voltages are as follows:

Supply	Min	Max	Note
VCC3.3	3.168V	3.432V	Should be $\pm 4\%$ for compliance with the ATX specification
Vcc	4.75V	5.25V	Should be $\pm 5\%$ for compliance with the ATX specification. Should be minimum 5.00V measured at USB connectors in order to meet the requirements of USB standard.
+12V	11.4V	12.6V	Should be $\pm 5\%$ for compliance with the ATX specification
-12V	-13.2V	-10.8V	Should be $\pm 10\%$ for compliance with the ATX specification
-5V	-5,50V	-4.5V	Not required for the KTQ67 board
5VSB	4.75V	5.25V	Should be $\pm 5\%$ for compliance with the ATX specification

More detailed Static Power Consumption

On the following pages the power consumption of the KTQ67 Board is measured under:

- 1- DOS, idle, mean
- 2- Windows7, Running 3DMARK 2005 & BiT 6, mean
- 3- S1, mean
- 4- S3, mean
- 5- S4, mean

The following items were used in the test setup:

Low Power Setup

Standard system configuration equipped with PCI card, Internal graphics, 2x SATA disks, Intel i3 CPU, 2x DIMM (1GB Modules), CRT Monitor, Keyboard & Mouse. 1x 1-4GB USB Flash Stick.

High Power Setup

Standard system configuration equipped with PCI card, PClex4, PClex16, miniPCIe WLAN, 4x SATA disks, Intel i7 CPU, 4x DIMM (2+2+2+1 Modules), CRT Monitor, Keyboard & Mouse, 4x 1-4GB USB Flash Stick.

1. 12V active cooler (Intel BOX).
2. USB Keyboard/Mouse Genius
3. CRT Sampo AlphaScan 912
4. 2.5" HDD Fujitsu MHY2120BH
5. ATX Fortron 400W
6. Tektronix TDS5104B
7. Tektronix TCPA300
8. Tektronix TCP312
9. Fluke 289
10. ATX rail switch

Note: The Power consumption of Display and HD are not included.

Low Power Setup results:

DOS Idle, Mean, No external load		
Supply	Current draw	Power consumption
+12V	0.258A	3.096W

3 Connector Locations

3.1 KTQ67/Flex – frontside

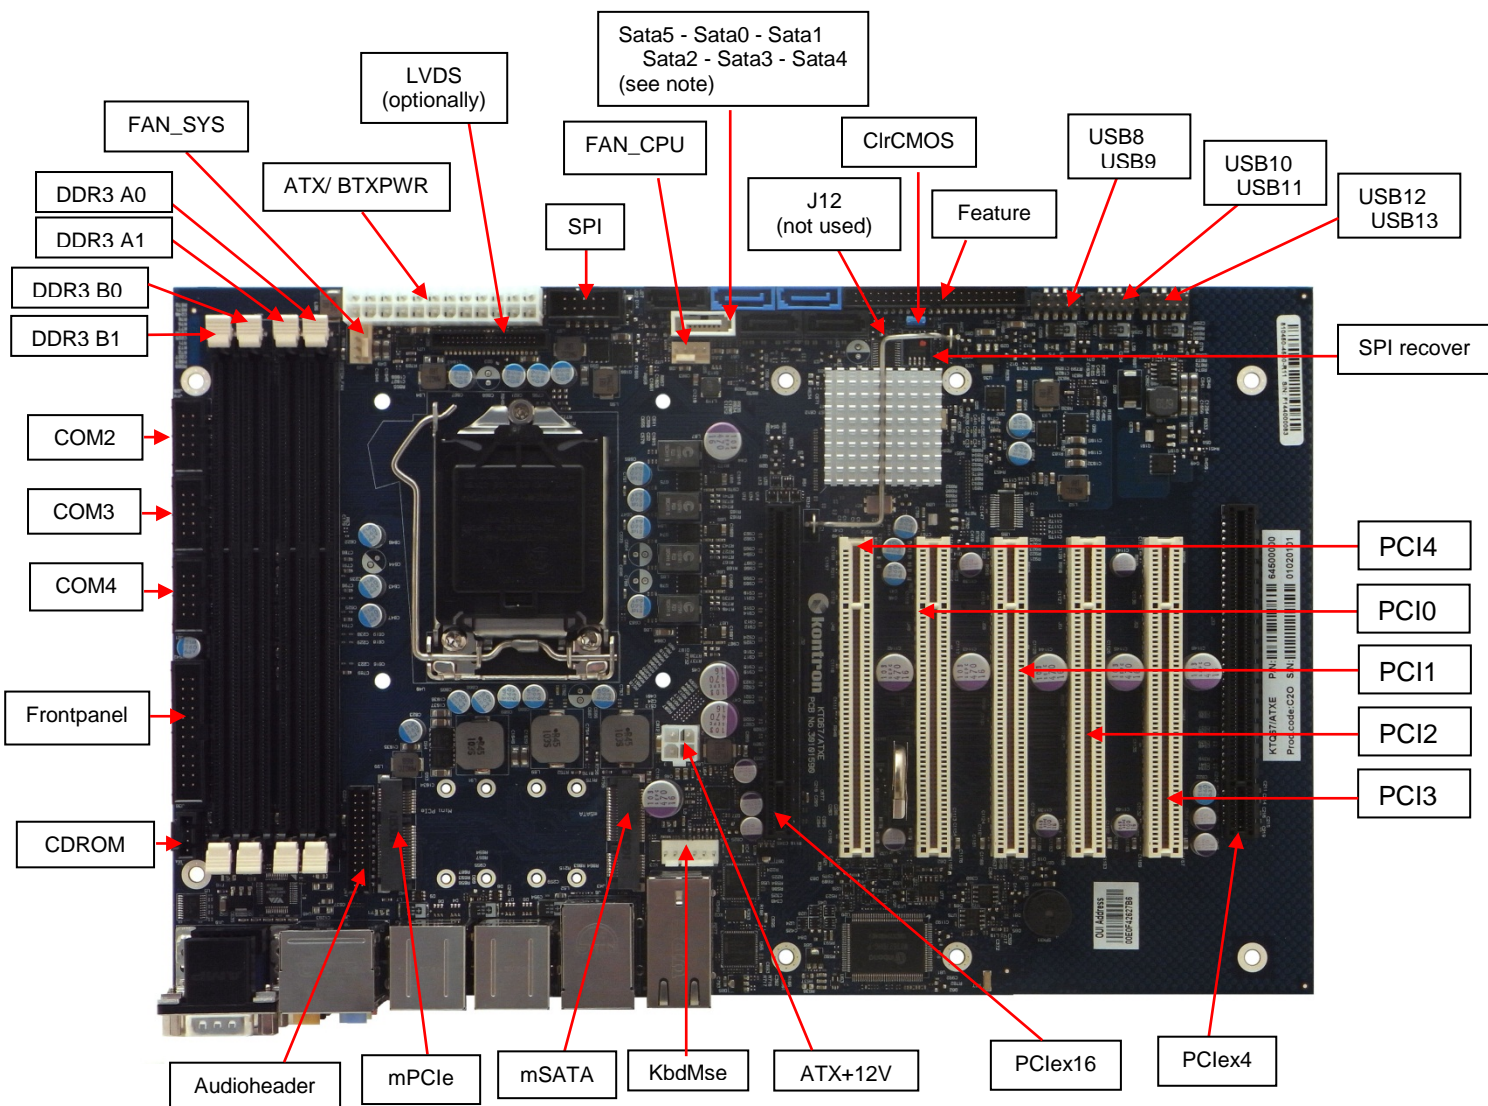

Notes: Sata0/Sata1support up to 6GB/s and Sata2/Sata3/Sata4/Sata5 support up to 3GB/S.

3.2 KTQ67/Flex - backside

(*) The LPT connector and the XDP connectors are not mounted in volume production.

3.3 KTQ67/ATXE

For location of the IO Area connectors, see "KTQ67/Flex- frontside".

3.4 KTQ67/ATXE - backside

(*) The LPT connector and the XDP connectors are not mounted in volume production.

4 Connector Definitions

The following sections provide pin definitions and detailed description of all on-board connectors.

The connector definitions follow the following notation:

Column name	Description
Pin	Shows the pin-numbers in the connector. The graphical layout of the connector definition tables is made similar to the physical connectors.
Signal	The mnemonic name of the signal at the current pin. The notation "XX#" states that the signal "XX" is active low.
Type	AI: Analogue Input. AO: Analogue Output. I: Input, TTL compatible if nothing else stated. IO: Input / Output. TTL compatible if nothing else stated. IOT: Bi-directional tristate IO pin. IS: Schmitt-trigger input, TTL compatible. IOC: Input / open-collector Output, TTL compatible. IOD: Input / Output, CMOS level Schmitt-triggered. (Open drain output) NC: Pin not connected. O: Output, TTL compatible. OC: Output, open-collector or open-drain, TTL compatible. OT: Output with tri-state capability, TTL compatible. LVDS: Low Voltage Differential Signal. PWR: Power supply or ground reference pins.
	Ioh: Typical current in mA flowing out of an output pin through a grounded load, while the output voltage is > 2.4 V DC (if nothing else stated). Iol: Typical current in mA flowing into an output pin from a VCC connected load, while the output voltage is < 0.4 V DC (if nothing else stated).
Pull U/D	On-board pull-up or pull-down resistors on input pins or open-collector output pins.
Note	Special remarks concerning the signal.

The abbreviation *TBD* is used for specifications which are not available yet or which are not sufficiently specified by the component vendors.

5 IO-Area Connectors

5.1 Display connectors (IO Area)

The KTQ67 family provides one on-board Analogue VGA port, two on-board DP's (DisplayPort) and optionally one on-board LVDS panel interface. Two graphic pipes are supported; meaning that up to two independent displays can be implemented using any two of the above mentioned graphic ports.

5.1.1 Analogue VGA (VGA)

Note	Pull U/D	Ioh/Iol	Type	Signal	PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
					6	GND	PWR	-	-	
	/75R	-	A0	RED	1	11	NC	-	-	
					7	GND	PWR	-	-	
	/75R	-	A0	GREEN	2	12	DDCDAT	IO	TBD	2K2
					8	GND	PWR	-	-	
	/75R	-	A0	BLUE	3	13	HSYNC	O	TBD

	-	-	-	NC	4	14	VSYNC	O	TBD	
					10	GND	PWR	-	-	
	-	-	PWR	GND	5	15	DDCCLK	IO	TBD	2K2

Note 1: The +5V supply is fused by a 1.1A resettable fuse

Signal Description - VGA Connector:

Pin	Signal	Description
1	RED	Analogue output carrying the red colour values. (75 Ohm cable impedance).
2	GREEN	Analogue output carrying the green colour values. (75 Ohm cable impedance).
3	BLUE	Analogue output carrying the blue colour values. (75 Ohm cable impedance).
4	NC	No Connection
5-8	GND	
9	5V	This 5V supply is fused by a 1.1A resettable fuse.
10	GND	
11	NC	No Connection
12	DDCDAT	Display Data Channel Data. Used as data signal to/from monitors with DDC interface.
13	HSYNC	CRT horizontal synchronization output.
14	VSYNC	CRT vertical synchronization output.
15	DDCCLK	Display Data Channel Clock. Used as clock signal to/from monitors with DDC interface.

5.1.2 DP Connectors (DP0/DP1)

The DP (DisplayPort) connectors are based on standard DP type Foxconn 3VD51203-H7JJ-7H or similar.

Pin	Signal	Description	Type	Note
1	Lane 0 (p)		LVDS	
2	GND		PWR	
3	Lane 0 (n)		LVDS	
4	Lane 1 (p)		LVDS	
5	GND		PWR	
6	Lane 1 (n)		LVDS	
7	Lane 2 (p)		LVDS	
8	GND		PWR	
9	Lane 2 (n)		LVDS	
10	Lane 3 (p)		LVDS	
11	GND		PWR	
12	Lane 3 (n)		LVDS	
13	Config1	Aux or DDC selection	I	Internally pull down (1Mohm). Aux channel on pin 15/17 selected as default (when NC) DDC channel on pin 15/17, If HDMI adapter used (3.3V)
14	Config2	(Not used)	O	Internally connected to GND
15	Aux Ch (p)	Aux Channel (+) or DDC Clk		AUX (+) channel used by DP DDC Clk used by HDMI
16	GND		PWR	
17	Aux Ch (n)	Aux Channel (-) or DDC Data		AUX (-) channel used by DP DDC Data used by HDMI
18	Hot Plug		I	Internally pull down (100Kohm).
19	Return		PWR	Same as GND
20	3.3V		PWR	Fused by 1.5A resetable PTC fuse, common for DP0 and DP1

5.2 Ethernet Connectors (IO Area)

The KTQ67 boards supports three channels of 10/100/1000Mb Ethernet, one (ETH1) is based on Intel® Lewisville 82579LM Gigabit PHY with AMT 7.0 support and the two other controllers (ETHER2 & ETHER3) are based on Intel® Hartwell 82574L PCI Express controller.

In order to achieve the specified performance of the Ethernet port, minimum Category 5 twisted pair cables must be used with 10/100MB and minimum Category 5E, 6 or 6E with 1Gb LAN networks.

The signals for the Ethernet ports are as follows:

Signal	Description
MDI[0]+ / MDI[0]-	In MDI mode, this is the first pair in 1000Base-T, i.e. the BI_DA+/- pair, and is the transmit pair in 10Base-T and 100Base-TX. In MDI crossover mode, this pair acts as the BI_DB+/- pair, and is the receive pair in 10Base-T and 100Base-TX.
MDI[1]+ / MDI[1]-	In MDI mode, this is the second pair in 1000Base-T, i.e. the BI_DB+/- pair, and is the receive pair in 10Base-T and 100Base-TX. In MDI crossover mode, this pair acts as the BI_DA+/- pair, and is the transmit pair in 10Base-T and 100Base-TX.
MDI[2]+ / MDI[2]-	In MDI mode, this is the third pair in 1000Base-T, i.e. the BI_DC+/- pair. In MDI crossover mode, this pair acts as the BI_DD+/- pair.
MDI[3]+ / MDI[3]-	In MDI mode, this is the fourth pair in 1000Base-T, i.e. the BI_DD+/- pair. In MDI crossover mode, this pair acts as the BI_DC+/- pair.

Note: MDI = Media Dependent Interface.

Ethernet connector 1 (ETH1) is mounted together with USB Ports 4 and 5.

Ethernet connector 2 (ETH2) is mounted together with and above Ethernet connector 3 (ETH3).

The pinout of the RJ45 connectors is as follows:

Signal	PIN	Type	Ioh/Iol	Note
MDI0+	1			
MDI0-	2			
MDI1+	3			
MDI2+	4			
MDI2-	5			
MDI1-	6			
MDI3+	7			
MDI3-	8			
	8 7 6 5 4 3 2 1			

5.3 USB Connectors (IO Area)

The KTQ67 board contains two EHCI (Enhanced Host Controller Interface) host controllers (EHCI1 and EHCI2) that support up to fourteen USB 2.0 ports allowing data transfers up to 480Mb/s. Legacy Keyboard/Mouse and wakeup from sleep states are supported. Over-current detection on all fourteen USB ports is supported. The following USB connectors are available in the IO Area.

USB Port 0 (via EHCI1) and 1 are supplied on the combined USB0, USB1 and DP0 connector.
 USB Port 2 and 3 (via EHCI1) are supplied on the combined USB2, USB3 and DP1 connector.
 USB Port 4 and 5 (via EHCI1) are supplied on the combined ETH1, USB4 and USB5 connector.

Note: It is required to use only HiSpeed USB cable, specified in USB2.0 standard:

5.3.1 USB Connector 0/1 (USB0/1)

USB Ports 0 and 1 are mounted together with DP0 port.

Note	Type	Signal	PIN	Signal	Type	Note
1	PWR	5V/SB5V	1 2 3 4	GND	PWR	
	IO	USB1-		USB1+	IO	
1	PWR	5V/SB5V	1 2 3 4	GND	PWR	
	IO	USB0-		USB0+	IO	

Note 1: In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

Signal	Description
USB0+ USB0- USB1+ USB1-	Differential pair works as Data/Address/Command Bus.
5V/SB5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by resettable 1A fuse covering both USB ports.

5.3.2 USB Connector 2/3 (USB2/3)

USB Ports 2 and 3 are mounted together with DP1 port.

Note	Type	Signal	PIN				Signal	Type	Note
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	USB3-					USB3+	IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	USB2-					USB2+	IO	

Note 1: In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

Signal	Description
USB2+ USB2- USB3+ USB3-	Differential pair works as Data/Address/Command Bus.
5V/SB5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by resettable 1A fuse covering both USB ports.

5.3.3 USB Connector 4/5 (USB4/5)

USB Ports 4 and 5 are mounted together with ETH1 port.

Note	Type	Signal	PIN				Signal	Type	Note
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	USB5-					USB5+	IO	
1	PWR	5V/SB5V	1	2	3	4	GND	PWR	
	IO	USB4-					USB4+	IO	

Note 1: In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

Signal	Description
USB4+ USB4- USB5+ USB5-	Differential pair works as Data/Address/Command Bus.
5V/SB5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by resettable 1A fuse covering both USB ports.

5.4 Audio Connector (IO Area)

The on-board Audio circuit implements 7.1+2 Channel High Definition Audio with UAA (Universal Audio Architecture), featuring five 24-bit stereo DACs and three 20-bit stereo ADCs. The Following Audio connector is available in IO Area.

Audio Speakers, Line-in and Microphone are available in the stacked audiojack connector

Note	Type	Signal			Signal	Type	Note

Audio header	-	-	-	Side speaker out
Audio header	-	Rear speaker out	Rear speaker out	Rear speaker out
Audio header	-	-	Center/ Subwoofer	Center/ Subwoofer

5.5 COM1 Connector (IO Area)

Four RS232 serial ports are available on the KTQ67, COM1 is available in the IO Area while the other COM ports are available on internal pin header connectors.

The typical definition of the signals in the COM ports is as follows:

Signal	Description
TxD	Transmitted Data, sends data to the communications link. The signal is set to the marking state (-12V) on hardware reset when the transmitter is empty or when loop mode operation is initiated.
RxD	Received Data, receives data from the communications link.
DTR	Data Terminal Ready, indicates to the modem etc. that the on-board UART is ready to establish a communication link.
DSR	Data Set Ready, indicates that the modem etc. is ready to establish a communications link.
RTS	Request To Send, indicates to the modem etc. that the on-board UART is ready to exchange data.
CTS	Clear To Send, indicates that the modem or data set is ready to exchange data.
DCD	Data Carrier Detect, indicates that the modem or data set has detected the data carrier.
RI	Ring Indicator, indicates that the modem has received a ringing signal from the telephone line.

The pinout of Serial ports COM1 is as follows:

Note	Pull U/D	Ioh/Iol	Type	Signal	PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
	-	-	PWR	GND	5					
					9	RI	I	-	/5K	
	-		O	DTR	4					
					8	CTS	I	-	/5K	
	-		O	TxD	3					
					7	RTS	O		-	
	/5K	-	I	RxD	2					
					6	DSR	I	-	/5K	
	/5K	-	I	DCD	1					

6 Internal Connectors

6.1 Power Connector (ATX/BTXPWR)

The KTQ67 boards are designed to be supplied from a standard ATX (or BTX) power supply. Use of BTX supply is not required for operation, but may be required to drive high-power PCIe cards.

ATX/ BTX Power Connector (J45):

Note	Type	Signal	PIN		Signal	Type	Note
	PWR	3V3	12	24	GND	PWR	
	PWR	+12V	11	23	5V	PWR	
	PWR	+12V	10	22	5V	PWR	
	PWR	SB5V	9	21	5V	PWR	
	I	P_OK	8	20	-5V	PWR	1
	PWR	GND	7	19	GND	PWR	
	PWR	5V	6	18	GND	PWR	
	PWR	GND	5	17	GND	PWR	
	PWR	5V	4	16	PSON#	OC	
	PWR	GND	3	15	GND	PWR	
	PWR	3V3	2	14	-12V	PWR	
	PWR	3V3	1	13	3V3	PWR	

Note 1: -5V supply is not used on-board.

See chapter “Power Consumption” regarding input tolerances on 3.3V, 5V, SB5V, +12 and -12V (also refer to ATX specification version 2.2).

ATX+12V-4pin Power Connector (J46):

Note	Type	Signal	PIN		Signal	Type	Note
	PWR	GND	2	4	+12V	PWR	1
	PWR	GND	1	3	+12V	PWR	1

Note 1: Use of the 4-pin ATX+12V Power Connector is required for operation of all KTQ67 board versions.

Signal	Description
P_OK	<p>P_OK is a power good signal and should be asserted high by the power supply to indicate that the +5VDC and +3.3VDC outputs are above the undervoltage thresholds of the power supply. When this signal is asserted high, there should be sufficient energy stored by the converter to guarantee continuous power operation within specification. Conversely, when the output voltages fall below the undervoltage threshold, or when mains power has been removed for a time sufficiently long so that power supply operation is no longer guaranteed, P_OK should be de-asserted to a low state. The recommended electrical and timing characteristics of the P_OK (PWR_OK) signal are provided in the <i>ATX12V Power Supply Design Guide</i>.</p> <p>It is strongly recommended to use an ATX or BTX supply in order to implement the supervision of the 5V and 3V3 supplies. These supplies are not supervised on-board.</p>
PS_ON#	Active low open drain signal from the board to the power supply to turn on the power supply outputs. Signal must be pulled high by the power supply.

6.2 Fan Connectors (FAN_CPU) (J28) and (FAN_SYS) (J29)

The **FAN_CPU** is used for the connection of the FAN for the CPU.

The **FAN_SYS** can be used to power, control and monitor a fan for chassis ventilation etc.

The 4pin header is recommended to be used for driving 4-wire type Fan in order to implement FAN speed control. 3-wire Fan is also possible, but no fan speed control is integrated.

4-pin Mode:

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	CONTROL	O	-	-	
2	SENSE	I	-	4K7	
3	+12V	PWR	-	-	
4	GND	PWR	-	-	

Signal	Description
CONTROL	PWM signal for FAN speed control
SENSE	Tacho signal from the fan for supervision. The signals shall be generated by an open collector transistor or similar. On-board is a pull-up resistor 4K7 to +12V. The signal has to be pulsed, typically twice per rotation.
12V	+12V supply for fan. A maximum of 2000mA can be supplied from this pin.
GND	Power Supply GND signal

3-pin Mode:

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
-					
2	SENSE	I	-	4K7	
3	+12V	PWR	-	-	
4	GND	PWR	-	-	

Signal	Description
SENSE	Tacho signal from the fan for supervision. The signals shall be generated by an open collector transistor or similar. On-board is a pull-up resistor 4K7 to +12V. The signal has to be pulsed, typically twice per rotation.
12V	+12V supply for fan. A maximum of 2000mA can be supplied from this pin.
GND	Power Supply GND signal

6.3 PS/2 Keyboard and Mouse connector (KBDMSE) (J15)

Attachment of a PS/2 keyboard/mouse can be done through the pinrow connector KBDMSE (J15). Both interfaces utilize open-drain signalling with on-board pull-up.

The PS/2 mouse and keyboard is supplied from SB5V when in standby mode in order to enable keyboard or mouse activity to bring the system out from power saving states. The supply is provided through a 1.1A resettable fuse.

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	KBDCLK	IOD	/14mA	2K7	
2	KBDDAT	IOD	/14mA	2K7	
3	MSCLK	IOD	/14mA	2K7	
4	MSDAT	IOD	/14mA	2K7	
5	5V/SB5V	PWR	-	-	
6	GND	PWR	-	-	

Signal Description – Keyboard & and mouse Connector (KBDMSE).

Signal	Description
MSCLK	Bi-directional clock signal used to strobe data/commands from/to the PS/2 mouse.
MSDAT	Bi-directional serial data line used to transfer data from or commands to the PS/2 mouse.
KDBCLK	Bi-directional clock signal used to strobe data/commands from/to the PC-AT keyboard.
KBDDAT	Bi-directional serial data line used to transfer data from or commands to the PC-AT keyboard.

6.4 Display connectors (Internal)

The KTQ67 family provides optionally internal on-board LVDS panel interface. For IO Area Display Connectors (VGA and two DP's), see earlier section.

Two graphic pipes are supported; meaning that up to two independent displays can be implemented using any two display connectors in IO Area - and Internal (LVDS) connector (optionally).

6.4.1 LVDS Flat Panel Connector (LVDS) (J39) (optionally)

Two graphic pipes are supported; meaning that up to two independent displays can be implemented using any two of display connectors (IO Area - and Internal connectors).

Note	Type	Signal	PIN	Signal	Type	Note

	LVDS	LVDS B1-	31 32	LVDS B1+	LVDS	
	LVDS	LVDS B2-	33 34	LVDS B2+	LVDS	
	LVDS	LVDS BCLK-	35 36	LVDS BCLK+	LVDS	
	LVDS	LVDS B3-	37 38	LVDS B3+	LVDS	
Max. 0.5A	PWR	GND	39 40	GND	PWR	Max. 0.5A

Note: The KTQ67 on-board LVDS connector supports single/dual channel, 18/24bit SPWG panels up to resolution 1600x1200 or 1920x1080 (1920x1200 with limited frame rate is possible).

Signal Description – LVDS Flat Panel Connector:

Signal	Description
LVDS A0..A3	LVDS A Channel data
LVDS ACLK	LVDS A Channel clock
LVDS B0..B3	LVDS B Channel data
LVDS BCLK	LVDS B Channel clock
BKLTCTL	Backlight control (1), PWM signal to implement voltage in the range 0-3.3V
BKLTEN#	Backlight Enable signal (active low) (2)
VDD ENABLE	Output Display Enable.
LCDVCC	VCC supply to the display. Power-on/off sequencing depending on selected (in BIOS setup) display type. 5V or 3.3V selected in BIOS setup. Maximum load is 1A.
DDC CLK	DDC Channel Clock

Notes: Windows API will be available to operate the BKLTCTL signal. Some Inverters have a limited voltage range 0- 2.5V for this signal: If voltage is > 2.5V the Inverter might latch up. Some Inverters generates noise on the BKLTCTL signal, resulting in making the LVDS transmission failing (corrupted picture on the display). By adding a 1Kohm resistor in series with this signal, mounted in the Inverter end of the cable kit, the noise is limited and the picture is stable. If the Backlight Enable is required to be active high, then check the following BIOS Chipset setting: Backlight Signal Inversion = Enabled.

6.5 SATA (Serial ATA) Disk interface (J22 – J27)

The KTQ67 boards have an integrated SATA Host controller (integrated in the PCH) that supports independent DMA operation on six ports. One device can be installed on each port for a maximum of six SATA devices. A point-to-point interface (SATA cable) is used for host to device connections. Data transfer rates of up to 6.0Gb/s (typically 600MB/s) on SATA0 and SATA1 (blue connectors) and 3.0Gb/s (typically 300MB/s) on SATA2, SATA3, SATA4 and SATA5 (black connectors). In case mSATA is used then the SATA2 is disabled.

The SATA controller supports:

- 2 to 6-drive RAID 0 (data striping)
- 2-drive RAID 1 (data mirroring)
- 3 to 6-drive RAID 5 (block-level striping with parity).
- 4-drive RAID 10 (data striping and mirroring)
- 2 to 6-drive matrix RAID (different parts of a single drive can be assigned to different RAID devices).
- AHCI (Advanced Host Controller Interface)
- NCQ (Native Command Queuing). NCQ is for faster data access.
- Hot Swap
- Intel® Rapid Recover Technology
- 2 – 256TB volume (Data volumes only)
- Capacity expansion
- TRIM in Windows 7 (in AHCI and RAID mode for drives not part of a RAID volume). (TRIM is for SSD data garbage handling).

The RAID (Redundant Array of Independent Drives) functionality is based on a firmware system with support for RAID modes 0 1, 5 and 10.

SATA connector pinning:

The pinout of SATA ports SATA0 (J27), SATA1 (J26), SATA2 (J25), SATA3 (J24), SATA4 (J23) and SATA5 (J22) is as follows:

PIN	Signal	Type	Ioh/Iol	Pull U/D	Note
1	GND	PWR	-	-	
2	SATA* TX+				
3	SATA* TX-				
4	GND	PWR	-	-	
5	SATA* RX-				
6	SATA* RX+				
7	GND	PWR	-	-	

The signals used for the primary SATA hard disk interface are the following:

Signal	Description
SATA* RX+ SATA* RX-	Host transmitter differential signal pair
SATA* TX+ SATA* TX-	Host receiver differential signal pair

“*” specifies 0, 1, 2, 3, 4, 5 depending on SATA port.

6.6 USB Connectors (USB)

The KTQ67 board contains two EHCI (Enhanced Host Controller Interface) host controllers (EHCI1 and EHCI2) that support up to fourteen USB 2.0 ports allowing data transfers up to 480Mb/s. Legacy Keyboard/Mouse and wakeup from sleep states are supported. Over-current detection on all fourteen USB ports is supported. The following USB ports are available on Internal Pinrows:

USB Port 6 and 7 (via EHCI1) are supplied on the USB6/7 internal pinrow FRONTPNL connector.

USB Port 8 and 9 (via EHCI2) are supplied on the USB8/9 internal pinrow connector.

USB Port 10 and 11 (via EHCI2) are supplied on the USB10/11 internal pinrow connector.

USB Port 12 and 13 (via EHCI2) are supplied on the USB12/13 internal pinrow connector.

Note: It is required to use only HiSpeed USB cable, specified in USB2.0 standard:

6.6.1 USB Connector 6/7

See Frontpanel Connector (FRONTPNL) description.

6.6.2 USB Connector 8/9 (USB8/9) (J18)

USB Ports 8 and 9 are supplied on the internal USB8/9 pinrow connector J18.

Note	Type	Signal	PIN	Signal	Type	Note
1	PWR	5V/SB5V	1 2	5V/SB5V	PWR	1
	IO	USB8-	3 4	USB9-	IO	
	IO	USB8+	5 6	USB9+	IO	
	PWR	GND	7 8	GND	PWR	
	NC	KEY	9 10	NC	NC	

Signal	Description
USB8+ USB8- USB9+ USB9-	Differential pair works as Data/Address/Command Bus.
5V/SB5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by resettable 1A fuse covering both USB ports.

6.6.3 USB Connector 10/11 (USB10/11) (J17)

USB Ports 10 and 11 are supplied on the internal USB10/11 pinrow connector J17.

Note	Type	Signal	PIN	Signal	Type	Note
1	PWR	5V/SB5V	1 2	5V/SB5V	PWR	1
	IO	USB10-	3 4	USB11-	IO	
	IO	USB10+	5 6	USB11+	IO	
	PWR	GND	7 8	GND	PWR	
	NC	KEY	9 10	NC	NC	

Signal	Description
USB10+ USB10- USB11+ USB11-	Differential pair works as Data/Address/Command Bus.
5V/SB5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by resettable 1A fuse covering both USB ports.

6.6.4 USB Connector 12/13 (USB12/13) (J16)

USB Ports 12 and 13 are supplied on the internal USB12/13 pinrow connector J16.

Note	Type	Signal	PIN	Signal	Type	Note
1	PWR	5V/SB5V	1 2	5V/SB5V	PWR	1
	IO	USB12-	3 4	USB13-	IO	
	IO	USB12+	5 6	USB13+	IO	
	PWR	GND	7 8	GND	PWR	
	NC	KEY	9 10	NC	NC	

Signal	Description
USB12+ USB12- USB13+ USB13-	Differential pair works as Data/Address/Command Bus.
5V/SB5V	5V supply for external devices. SB5V is supplied during powerdown to allow wakeup on USB device activity. Protected by resettable 1A fuse covering both USB ports.

Note 1: In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

6.7 Serial COM2 – COM4 Ports (J19, J20, J21)

Three RS232 serial ports are available on the KTQ67 via pin-row connector. (COM 1 is in the IO area and is based on standard DB9 connector, see other section for more info).

The typical definition of the signals in the COM ports is as follows:

Signal	Description
TxD	Transmitted Data, sends data to the communications link. The signal is set to the marking state (-12V) on hardware reset when the transmitter is empty or when loop mode operation is initiated.
RxD	Received Data, receives data from the communications link.
DTR	Data Terminal Ready, indicates to the modem etc. that the on-board UART is ready to establish a communication link.
DSR	Data Set Ready, indicates that the modem etc. is ready to establish a communications link.
RTS	Request To Send, indicates to the modem etc. that the on-board UART is ready to exchange data.
CTS	Clear To Send, indicates that the modem or data set is ready to exchange data.
DCD	Data Carrier Detect, indicates that the modem or data set has detected the data carrier.
RI	Ring Indicator, indicates that the modem has received a ringing signal from the telephone line.

The pinout of Serial ports COM2 (J20), COM3 (J19) and COM4 (J21) is as follows:

Note	Ioh/Iol	Type	Signal	PIN	Signal	Type	Ioh/Iol	Note
	-	I	DCD	1 2	DSR	I	-	
	-	I	RxD	3 4	RTS	O		
		O	TxD	5 6	CTS	I	-	
		O	DTR	7 8	RI	I	-	
	-	PWR	GND	9 10	5V	PWR	-	1

Note 1: The COM2, COM3 and COM4 5V supply is fused with common 1.1A resettable fuse.

DB9 adapter cables (PN 821016 200mm long and 821017 100mm long) are available for implementing standard COM ports on chassis.

6.8 Audio Connectors

The on-board Audio circuit implements 7.1+2 Channel High Definition Audio with UAA (Universal Audio Architecture), featuring five 24-bit stereo DACs and three 20-bit stereo ADCs.

The following Audio connectors are available as internal connectors.

6.8.1 CDROM Audio Input (CDROM) (J44)

CD-ROM audio input may be connected to this connector or it can be used as secondary line-in signal.

PIN	Signal	Type	Note
1	CD_Left	IA	1
2	CD_GND	IA	
3	CD_GND	IA	
4	CD_Right	IA	1

Note 1: The definition of which pins are used for the Left and Right channels is not a worldwide accepted standard. Some CDROM cable kits expect reverse pin order.

Signal	Description
CD_Left CD_Right	Left and right CD audio input lines or secondary Line-in.
CD_GND	Analogue GND for Left and Right CD. (This analogue GND is not shorted to the general digital GND on the board).

6.8.2 Line2 and Mic2

Line2 and Mic2 are accessible via Feature Connector, see Feature connector description.

6.8.1 Audio Header Connector (AUDIO_HEAD) (J47)

Note	Type	Signal	PIN	Signal	Type	Note

Signal	Description
USB10/11_5V	5V supply for external devices. SB5V is supplied during power down to allow wakeup on USB device activity. Protected by resettable 1.1A fuse covering both USB ports.
USB1+ USB1-	Universal Serial Bus Port 1 Differentials: Bus Data/Address/Command Bus.
USB3+ USB3-	Universal Serial Bus Port 3 Differentials: Bus Data/Address/Command Bus.
+5V	Maximum load is 1A or 2A per pin if using IDC connector flat cable or crimp terminals respectively.
SATA_LED#	SATA Activity LED, active low signal (via 470Ω). Recommended is using Low Power LED like HLMP4700 with anode connected to +5V (pin 11). When red color LED is used, possible weak glowing could be noticed when the LED supposed to be off. In order to eliminate this problem a resistor 3K3 can be connected in parallel with the LED or a diode can be connected in series with the LED.
SUS_LED	Suspend Mode LED (active high signal). Output 3.3V via 470Ω.
PWRBTN_IN#	Power Button In. Toggle this signal low to start the ATX / BTX PSU and boot the board.
RSTIN#	Reset Input. When pulled low for a minimum 16ms, the reset process will be initiated. The reset process continues even though the Reset Input is kept low.
LINE2	Line2 is second stereo Line signals
MIC2	MIC2 is second stereo microphone input.
SB3V3	Standby 3.3V voltage
AGND	Analogue Ground for Audio

Note: In order to meet the requirements of USB standard, the 5V input supply must be at least 5.00V.

6.10 Feature Connector (FEATURE) (J30)

Notes: 1. Pull-up to +3V3Dual (+3V3 or SB3V3). 2. Pull-up to on-board Battery.

Signal	Description
CASE_OPEN#	CASE OPEN, used to detect if the system case has been opened. This signal's status is readable, so it may be used like a GPI when the Intruder switch is not required.
SMBC	SMBus Clock signal
SMBD	SMBus Data signal
S3#	S3 sleep mode, active low output, optionally used to deactivate external system.
S5#	S5 sleep mode, active low output, optionally used to deactivate external system.
PWR_OK	PoWeR OK, signal is high if no power failures are detected. (This is not the same as the P_OK signal generated by ATX PSU).
EXT_BAT	(EXTERNAL BATTERY) option for connecting + terminal of an external primary cell battery (2.5 - 4.0 V) (- terminal connected to GND etc. pin 20). The external battery is protected against charging and can be used with or without the on-board battery installed.
FAN3OUT	FAN 3 speed control OUTPUT, 3.3V PWM signal can be used as Fan control voltage.
FAN3IN	FAN3 Input. 0V to +3V3 amplitude Fan 3 tachometer input.
FAN4OUT	FAN 4 speed control OUTPUT, 3.3V PWM signal can be used as Fan control voltage.
FAN4IN	FAN4 Input. 0V to +3V3 amplitude Fan 3 tachometer input.
SB3V3	Max. load is 0.75A (1.5A < 1 sec.)
SB5V	StandBy +5V supply.
GPIO0..17	General Purpose Inputs / Output. These Signals may be controlled or monitored through the use of the KT-API-V2 (Application Programming Interface).
EGCLK	Extend GPIO Clock signal
EGAD	Extend GPIO Address Data signal
EGCS#	Extend GPIO Chip Select signal, active low
TMA0	Timer Output
+12V	Max. load is 0.75A (1.5A < 1 sec.)

GPIO in more details.

The GPIO's are controlled via the ITE IT8516F Embedded Controller. Each GPIO has 100pF to ground, clamping Diode to 3V3 and has multiplexed functionality. Some pins can be DAC (Digital to Analogue Converter output), PWM (Pulse Width Modulated signal output), ADC (Analogue to Digital Converter input), TMRI (Timer Counter Input), WUI (Wake Up Input), RI (Ring Indicator Input) or some special function.

Signal	IT8516F pin name	Type	+5V tolerant	Description
GPIO0	DAC0/GPJ0	AO/IOS	No	
GPIO1	DAC1/GPJ1	AO/IOS	No	
GPIO2	DAC2/GPJ2	AO/IOS	No	
GPIO3	DAC3/GPJ3	AO/IOS	No	
GPIO4	PWM2/GPA2	O8/IOS	Yes	
GPIO5	PWM3/GPA3	O8/IOS	Yes	
GPIO6	PWM4/GPA4	O8/IOS	Yes	
GPIO7	PWM5/GPA5	O8/IOS	Yes	
GPIO8	ADC0/GPI0	AI/IS	No	
GPIO9	ADC1/GPI1	AI/IS	No	
GPIO10	ADC2/GPI2	AI/IS	No	
GPIO11	ADC3/GPI3	AI/IS	No	
GPIO12	ADC4/WUI28/GPI4	AI/IS/IS	No	
GPIO13	RI1#/WUI0/GPD0	IS/IS/IOS	Yes	
GPIO14	RI2#/WUI1/GPD1	IS/IS/IOS	Yes	
GPIO15	TMRI0/WUI2/GPC4	IS/IS/IOS	Yes	
GPIO16	TMRI1/WUI3/GPC6	IS/IS/IOS	Yes	
GPIO17	L80HLAT/BAO/WUI24/GPE0	O4/O4/IS/IOS	Yes	

6.11 Clear CMOS Jumper (J11)

The Clear-CMOS Jumper (J11) is used to clear the CMOS content.

J11		Description
pin1-2	pin2-3	
X	-	Clear CMOS data
-	X	Default positions
-	-	Secure CMOS function is disabled and Default values are used

Warning: Don't leave the jumper in position 1-2, otherwise the battery will fully depleted within a few weeks if power to the board is disconnected.

To clear CMOS settings, including Password protection, move the Clear CMOS jumper to pin 1-2 for a few seconds (~10 sec) (works with or without power connected to the system).

To disable the Secure CMOS function (selected in BIOS), remove the jumper completely from J11.

Leave the Jumper in position 2-3 (default position).

6.12 ClrRTC (J12)

The ClrRTC (J12) connector is not used. Do not install any jumper in case J12 pin row is available.

6.13 SPI Recover Jumper (J41)

The SPI Recover Jumper is used to select BIOS Recovery SPI Flash instead of the BIOS Default SPI Flash.

Normally Jumper is not installed and board boots on the BIOS Default SPI Flash.

Only in case the Default BIOS gets corrupted and board do not boot:

Then turn off power
Install Jumper (J41)
Try rebooting

After rebooting, remove the Jumper before Default BIOS is recovered by reloading BIOS (for instance by using latest BIOS upgrade package from web product page).

Verify that Default BIOS has been recovered by making a successful reboot.

Warning: If the jumper (J41) is mounted and you make BIOS Upgrade etc. then the BIOS Recovery SPI Flash will be Upgraded and not the BIOS Default SPI Flash. This means that in case something goes wrong (power interruption or incorrect BIOS package used etc.) when Upgrading BIOS, then the BIOS Recovery SPI Flash might get corrupted.

6.14 SPI Connector (SPI) (J40)

The SPI Connector is normally not used. If however a SPI BIOS is connected via the SPI Connector then the board will try to boot on it.

Note	Pull U/D	Ioh/Iol	Type	Signal	PIN	Signal	Type	Ioh/Iol	Pull U/D	Note

Signal	Description
CLK	Serial Clock
SB3V3	3.3V Standby Voltage power line. Normally output power, but when Motherboard is turned off then the on-board SPI Flash can be 3.3V power sourced via this pin.
CS0#	CS0# Chip Select 0, active low.
ADDIN	ADDIN input signal must be NC.
MOSI	Master Output, Slave Input
ISOLATE#	The ISOLATE# input, active low, is normally NC, but must be connected to GND when loading SPI flash. Power Supply to the Motherboard must be turned off when loading SPI flash. The pull up resistor is connected via diode to 5VSB.
MISO	Master Input, Slave Output

6.15 XDP-CPU (Debug Port for CPU) (J14)

The XDP-CPU (Intel Debug Port for CPU) connector is not mounted and not supported. XDP connector layout (pads) is located on the backside of PCB and is prepared for the Molex 52435-2671 (or 52435-2672).

7 Slot Connectors (PCIe, mSATA, miniPCIe, PCI)

7.1 PCIe Connectors

All members of the KTQ67 family supports one (x16) (16-lane) PCI Express port, one x4 PCI Express port (in a x16 PCI Express connector) and two miniPCI Express ports.

The **16-lane (x16) PCI Express** (PCIe 2.0) port can be used for external PCI Express cards inclusive graphics card. It is located nearest the CPU. Maximum theoretical bandwidth using 16 lanes is 16 GB/s.

The two **miniPCIe** (PCIe 2.0) is located on the backside of the board.

The **4-lane (x4) PCI Express** (PCIe 2.0) can be used for any PCIe1, PCIe2 or PCIe4 cards inclusive "Riser PCIe1 to PCI Dual flexible card". (EFT samples support only PCIe x1).

7.1.1 PCI-Express x16 Connector (PCIe x16)

Note 2: 2K2 ohm pull-up to 3V3 Dual.

7.1.4 PCI-Express x4 Connector (PCIe x4) (J33)

The KTQ67 supports one PCIe x4 in a PCIe x16 slot. All GND pins in the PCIe x16 connector are connected to GND, but all signal pins from pin 33 and above are all unconnected. (EFT samples support only PCIe x1).

Note	Type	Signal	PIN		Signal	Type	Note

Note 1: 10K ohm pull-up to 3V3 Dual.

7.2 PCI Slot Connectors

KTQ67/Flex support 2 PCI slots PCI0 – PCI1 (J1 – J2).

KTQ67/ATXE supports 5 PCI slots PCI0 – PCI4 (J48 – J52).

7.2.1 Signal Description – PCI Slot Connector

SYSTEM PINS	
CLK	Clock provides timing for all transactions on PCI and is an input to every PCI device. All other PCI signals, except RST#, INTA#, INTB#, INTC#, and INTD#, are sampled on the rising edge of CLK and all other timing parameters are defined with respect to this edge. PCI operates at 33MHz.
PME#	Power Management Event interrupt signal. Wake up signal.
RST#	Reset is used to bring PCI-specific registers, sequencers, and signals to a consistent state. What effect RST# has on a device beyond the PCI sequencer is beyond the scope of this specification, except for reset states of required PCI configuration registers. Anytime RST# is asserted, all PCI output signals must be driven to their benign state. In general, this means they must be asynchronously tri-stated. SERR# (open drain) is floated. REQ# and GNT# must both be tri-stated (they cannot be driven low or high during reset). To prevent AD, C/BE#, and PAR signals from floating during reset, the central resource may drive these lines during reset (bus parking) but only to a logic low level—they may not be driven high. RST# may be asynchronous to CLK when asserted or deasserted. Although asynchronous, deassertion is guaranteed to be a clean, bounce-free edge. Except for configuration accesses, only devices that are required to boot the system will respond after reset.
ADDRESS AND DATA	
AD[31::00]	Address and Data are multiplexed on the same PCI pins. A bus transaction consists of an address phase followed by one or more data phases. PCI supports both read and write bursts. The address phase is the clock cycle in which FRAME# is asserted. During the address phase AD[31::00] contain a physical address (32 bits). For I/O, this is a byte address; for configuration and memory, it is a DWORD address. During data phases AD[07::00] contain the least significant byte (lsb) and AD[31::24] contain the most significant byte (msb). Write data is stable and valid when IRDY# is asserted and read data is stable and valid when TRDY# is asserted. Data is transferred during those clocks where both IRDY# and TRDY# are asserted.
C/BE[3::0]#	Bus Command and Byte Enables are multiplexed on the same PCI pins. During the address phase of a transaction, C/BE[3::0]# define the bus command. During the data phase C/BE[3::0]# are used as Byte Enables. The Byte Enables are valid for the entire data phase and determine which byte lanes carry meaningful data. C/BE[0]# applies to byte 0 (lsb) and C/BE[3]# applies to byte 3 (msb).
PAR	Parity is even parity across AD[31::00] and C/BE[3::0]#. Parity generation is required by all PCI agents. PAR is stable and valid one clock after the address phase. For data phases, PAR is stable and valid one clock after either IRDY# is asserted on a write transaction or TRDY# is asserted on a read transaction. Once PAR is valid, it remains valid until one clock after the completion of the current data phase. (PAR has the same timing as AD[31::00], but it is delayed by one clock.) The master drives PAR for address and write data phases; the target drives PAR for read data phases.
INTERFACE CONTROL PINS	
FRAME#	Cycle Frame is driven by the current master to indicate the beginning and duration of an access. FRAME# is asserted to indicate a bus transaction is beginning. While FRAME# is asserted, data transfers continue. When FRAME# is deasserted, the transaction is in the final data phase or has completed.
IRDY#	Initiator Ready indicates the initiating agent's (bus master's) ability to complete the current data phase of the transaction. IRDY# is used in conjunction with TRDY#. A data phase is completed on any clock both IRDY# and TRDY# are sampled asserted. During a write, IRDY# indicates that valid data is present on AD[31::00]. During a read, it indicates the master is prepared to accept data. Wait cycles are inserted until both IRDY# and TRDY# are asserted together.
TRDY#	Target Ready indicates the target agent's (selected device's) ability to complete the current data phase of the transaction. TRDY# is used in conjunction with IRDY#. A data phase is completed on any clock both TRDY# and IRDY# are sampled asserted. During a read, TRDY# indicates that valid data is present on AD[31::00]. During a write, it indicates the target is prepared to accept data. Wait cycles are inserted until both IRDY# and TRDY# are asserted together.
STOP#	Stop indicates the current target is requesting the master to stop the current transaction.
LOCK#	Lock indicates an atomic operation that may require multiple transactions to complete. When LOCK# is asserted, non-exclusive transactions may proceed to an address that is not currently locked. A grant to start a transaction on PCI does not guarantee control of LOCK#. Control of LOCK# is obtained under its own protocol in conjunction with GNT#. It is possible for different agents to use PCI while a single master retains ownership of LOCK#. If a device implements Executable Memory, it should also implement LOCK# and guarantee complete access exclusion in that memory. A target of an access that supports LOCK# must provide exclusion to a minimum of 16 bytes (aligned). Host bridges that have system memory behind them should implement LOCK# as a target from the PCI bus point of view and optionally as a master.
IDSEL	Initialization Device Select is used as a chip select during configuration read and write transactions.
DEVSEL#	Device Select, when actively driven, indicates the driving device has decoded its address as the target of the current access. As an input, DEVSEL# indicates whether any device on the bus has been selected.

ARBITRATION PINS (BUS MASTERS ONLY)

REQ#	Request indicates to the arbiter that this agent desires use of the bus. This is a point to point signal. Every master has its own REQ# which must be tri-stated while RST# is asserted.
GNT#	Grant indicates to the agent that access to the bus has been granted. This is a point to point signal. Every master has its own GNT# which must be ignored while RST# is asserted. While RST# is asserted, the arbiter must ignore all REQ# lines since they are tri-stated and do not contain a valid request. The arbiter can only perform arbitration after RST# is deasserted. A master must ignore its GNT# while RST# is asserted. REQ# and GNT# are tri-state signals due to power sequencing requirements when 3.3V or 5.0V only add-in boards are used with add-in boards that use a universal I/O buffer.

ERROR REPORTING PINS.

The error reporting pins are required by all devices and maybe asserted when enabled

PERR#	Parity Error is only for the reporting of data parity errors during all PCI transactions except a Special Cycle. The PERR# pin is sustained tri-state and must be driven active by the agent receiving data two clocks following the data when a data parity error is detected. The minimum duration of PERR# is one clock for each data phase that a data parity error is detected. (If sequential data phases each have a data parity error, the PERR# signal will be asserted for more than a single clock.) PERR# must be driven high for one clock before being tri-stated as with all sustained tri-state signals. There are no special conditions when a data parity error may be lost or when reporting of an error may be delayed. An agent cannot report a PERR# until it has claimed the access by asserting DEVSEL# (for a target) and completed a data phase or is the master of the current transaction.
SERR#	System Error is for reporting address parity errors, data parity errors on the Special Cycle command, or any other system error where the result will be catastrophic. If an agent does not want a non-maskable interrupt (NMI) to be generated, a different reporting mechanism is required. SERR# is pure open drain and is actively driven for a single PCI clock by the agent reporting the error. The assertion of SERR# is synchronous to the clock and meets the setup and hold times of all bused signals. However, the restoring of SERR# to the deasserted state is accomplished by a weak pullup (same value as used for s/t/s) which is provided by the system designer and not by the 60signaling agent or central resource. This pull-up may take two to three clock periods to fully restore SERR#. The agent that reports SERR#s to the operating system does so anytime SERR# is sampled asserted.

INTERRUPT PINS (OPTIONAL).

Interrupts on PCI are optional and defined as "level sensitive," asserted low (negative true), using open drain output drivers. The assertion and deassertion of INTx# is asynchronous to CLK. A device asserts its INTx# line when requesting attention from its device driver. Once the INTx# signal is asserted, it remains asserted until the device driver clears the pending request. When the request is cleared, the device deasserts its INTx# signal. PCI defines one interrupt line for a single function device and up to four interrupt lines for a multi-function device or connector. For a single function device, only INTA# may be used while the other three interrupt lines have no meaning.

INTA#	Interrupt A is used to request an interrupt.
INTB#	Interrupt B is used to request an interrupt and only has meaning on a multi-function device.
INTC#	Interrupt C is used to request an interrupt and only has meaning on a multi-function device.
INTD#	Interrupt D is used to request an interrupt and only has meaning on a multi-function device.

7.2.2 KTQ67 PCI IRQ & INT routing

Board type	Slot	REQ	GNT	IDSEL	INTA	INTB	INTC	INTD
KTQ67/Flex	0	REQ0	GNT0	17	INTA	INTB	INTC	INTD
	1	REQ1	GNT1	18	INTF	INTG	INTH	INTE
KTQ67/ATXE	0	REQ0	GNT0	17	INTA	INTB	INTC	INTD
	1	REQ1	GNT1	18	INTF	INTG	INTH	INTE
	2	REQ2	GNT2	19	INTG	INTH	INTE	INTF
	3	REQ3	GNT3	20	INTH	INTE	INTF	INTG
	4	REQ4	GNT4	21	INTE	INTF	INTG	INTH

When using the 820982 "PCI Riser - Flex - 2slot w. arbiter" the lower slot has IDSEL / IRQs routed straight through and the top slot has the routing: IDSEL=AD22, INT_PIRQ#F, INT_PIRQ#G, INT_PIRQ#H, INT_PIRQ#E. 820982 PCI Riser shall be plugged into Slot 0 and jumper in AD30.

8 On-board - & mating connector types

The Mating connectors / Cables are connectors or cable kits which are fitting the On-board connector. The highlighted cable kits (in **bold**) are included in the “KTQ67 Cable & Driver Kit” PN 826599, in different quantities depending on type of connector. For example there are 4x 821017 COM cables and 6x 821035 SATA cables.

Connector	On-board Connectors		Mating Connectors / Cables	
	Manufacturer	Type no.	Manufacturer	Type no.
FAN_CPU	Foxconn	HF2704E-M1	AMP	1375820-4 (4-pole)

BIOS

The BIOS Setup is used to view and configure BIOS settings for the board. The BIOS Setup is accessed by pressing the -key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins.

The BIOS settings will be loaded automatically when loading “Restore Default” see “Save & Exit” menu. In this Users Guide the default settings are indicated by **bold**. Please notice that “Restore User Defaults” might have different set of default values.

Function	Selection	Description
PCI ROM Priority	Legacy ROM EFI Compatible ROM	In case of multiple Option ROMs (Legacy and EFI Compatible), specifies what PCI Option ROM to launch.
PCI Latency Timer	32 PCI Bus Clocks 64 PCI Bus Clocks 96 PCI Bus Clocks 128 PCI Bus Clocks 160 PCI Bus Clocks 192 PCI Bus Clocks 224 PCI Bus Clocks 248 PCI Bus Clocks	Value to be programmed into PCI Latency Timer Register.
VGA Palette Snoop	Disabled Enabled	Enables or Disables VGA Palette Registers Snooping.
PERR# Generation	Disabled Enabled	Enables or Disables PCI Device to Generate PERR#.
SERR# Generation	Disabled Enabled	Enables or Disables PCI Device to Generate SERR#.

9.5.1.1 PCI Express Settings

Aptio Setup Utility – Copyright © 2011 American Megatrends, Inc.		
Advanced		
PCI Express Device Register Settings Relaxed Ordering [Disabled] Extended Tag [Disabled] No Snoop [Enabled] Maximum Payload [Auto] Maximum Read Request [Auto]		Enables or Disables PCI Express Device Relaxed Ordering.
PCI Express Link Register Settings ASPM Support [Disabled] WARNING: Enabling ASPM may cause Some PCI-E devices to fail Extended Synch [Disabled]		
Link Training Retry [5] Link Training Timeout (uS) 100 Unpopulated Links [Keep Link ON]		←→ : Select Screen ↑↓ : Select Item Enter: Select +/- : Change Opt. F1: General Help F2: Previous Values F3: Optimized Defaults F4: Save & Exit ESC: Exit
Version 2.11.1210. Copyright © 2011 American Megatrends, Inc		

Function	Selection	Description
Relaxed Ordering	Disabled Enabled	Enables or Disables PCI Express Device Relaxed Ordering.
Extended Tag	Disabled Enabled	If ENABLED allows Device to use 8-bit Tag field as a requester.
No Snoop	Disabled Enabled	Enables or Disables PCI Express Device No Snoop option.
Maximum Payload	Auto 128 Bytes 256 Bytes 512 Bytes 1024 Bytes 2048 Bytes 4096 Bytes	Set Maximum Payload of PCI Express Device or allow System BIOS to select the value.
Maximum Read Request	Auto 128 Bytes 256 Bytes 512 Bytes 1024 Bytes 2048 Bytes 4096 Bytes	Set Maximum Read Request Size of PCI Express Device or allow System BIOS to select the value.
ASPM Support	Disabled Auto Force L0s	Set the ASPM Level: Force L0s - Force all links to L0s State: Auto – BIOS auto configure: Disable – Disabled ASPM
Extended Synch	Disabled Enabled	If ENABLED allows generation of Extended Synchronization patterns.
Link Training Retry	Disabled 2 3 5	Defines number of Retry Attempts software will take to retrain the link if previous training attempt was unsuccessful.
Link Training Timeout (uS)	100 (note1)	Defines number of Microseconds software will wait before polling 'Link Training' bit in Link Status register. Value range from 1 to 100uS.
Unpopulated Links	Keep Link ON Disable Link	In order to save power, software will disable unpopulated PCI Express links, if this option set to 'Disabled Link'.

Note1: Use either digit keys to enter value or +/- keys to increase/decrease value. Don't use mix of digit keys and +/- keys.

9.5.2 Advanced - APCI Settings

Aptio Setup Utility – Copyright © 2011 American Megatrends, Inc.

Advanced

<p>ACPI Settings</p> <p>Enable ACPI Auto Configuration [Disabled]</p> <p>Enable Hibernation [Enabled]</p> <p>ACPI Sleep State [S3 (Suspend to RAM)]</p> <p>Lock Legacy Resources [Disabled]</p>	<p>Enables or Disables BIOS APCI Auto Configuration.</p>

Version 2.11.1210. Copyright © 2011 American Megatrends, Inc

Function	Selection	Description
Hyper-threading	Disabled Enabled	Enabled for Windows XP and Linux (OS optimized for Hyper-Threading Technology) and Disabled for other OS (OS not optimized for Hyper-Threading Technology). When Disabled only one thread per enabled core is enabled.
Active Processor Cores	All 1 2 3	Number of cores to enable in each processor package.
Limit CPUID Maximum	Disabled Enabled	Disabled for Windows XP
Execute Disable Bit	Disabled Enabled	XD can prevent certain classes of malicious buffer overflow attacks when combined with supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, RedHat Enterprise 3 Update 3.)
Hardware Prefetcher	Disabled Enabled	To turn on/off the Mid Level Cache (L2) streamer prefetcher.
Adjacent Cache Line Prefetch	Disabled Enabled	To turn on/off the prefetching of adjacent cache line.
Intel Virtualization Technology	Disabled Enabled	When enabled, a VMM can utilize the additional hardware capabilities provided by Vanderpool Technology.
Power Technology	Disable Energy Efficient Custom	Enable the power management features.
Local x2APIC	Disabled Enabled	Enable Local x2APIC. Some OSes do not support this.
Long duration power limit	0 (0 – 255)	Long duration power limit in Watts.
Factory long duration maintained	0 (0 – 32000)	Time window which the long duration power is maintained.
Recommended short duration power 1	0 (0 – 255)	Short duration power limit in Watts.

Notes:

Intel HT Technology (Hyper Threading Technology) is a performance feature which allows one core on the processor to appear like 2 cores to the operating system. This doubles the execution resources available to the O/S, which potentially increases the performance of your overall system.

Intel VT-x Technology (Virtualization Technology) Previously codenamed "Vanderpool", VT-x represents Intel's technology for virtualization on the x86 platform. In order to support "Virtualization Technology" the CPU must support VT-x and the BIOS setting "Intel Virtualization Technology" must be enabled.

Intel SMX Technology (Safer Mode Extensions Technology) is a part of the Trusted Execution Technology.

9.5.5 Advanced - SATA Configuration

The below description is only when SATA Mode = AHCI Mode. For other SATA Modes see next pages.

Version 2.11.1210. Copyright © 2011 American Megatrends, Inc

SMX (Intel Secure Mode Extension) instructions are enabled if supported by the CPU, so no BIOS settings are present.

VT (Intel Virtualization Technology) is enabled/disabled in the menu: *Advanced > CPU Configuration*.

VT-d can be enabled/disabled in the menu: *Chipset > System Agent (SA) Configuration*.

Function	Selection	Description
Intel TXT support	Disabled Enabled	Enables or Disables Intel ® TXT (LT) support.

9.5.8 Advanced - USB Configuration

Aptio Setup Utility – Copyright © 2011 American Megatrends, Inc.

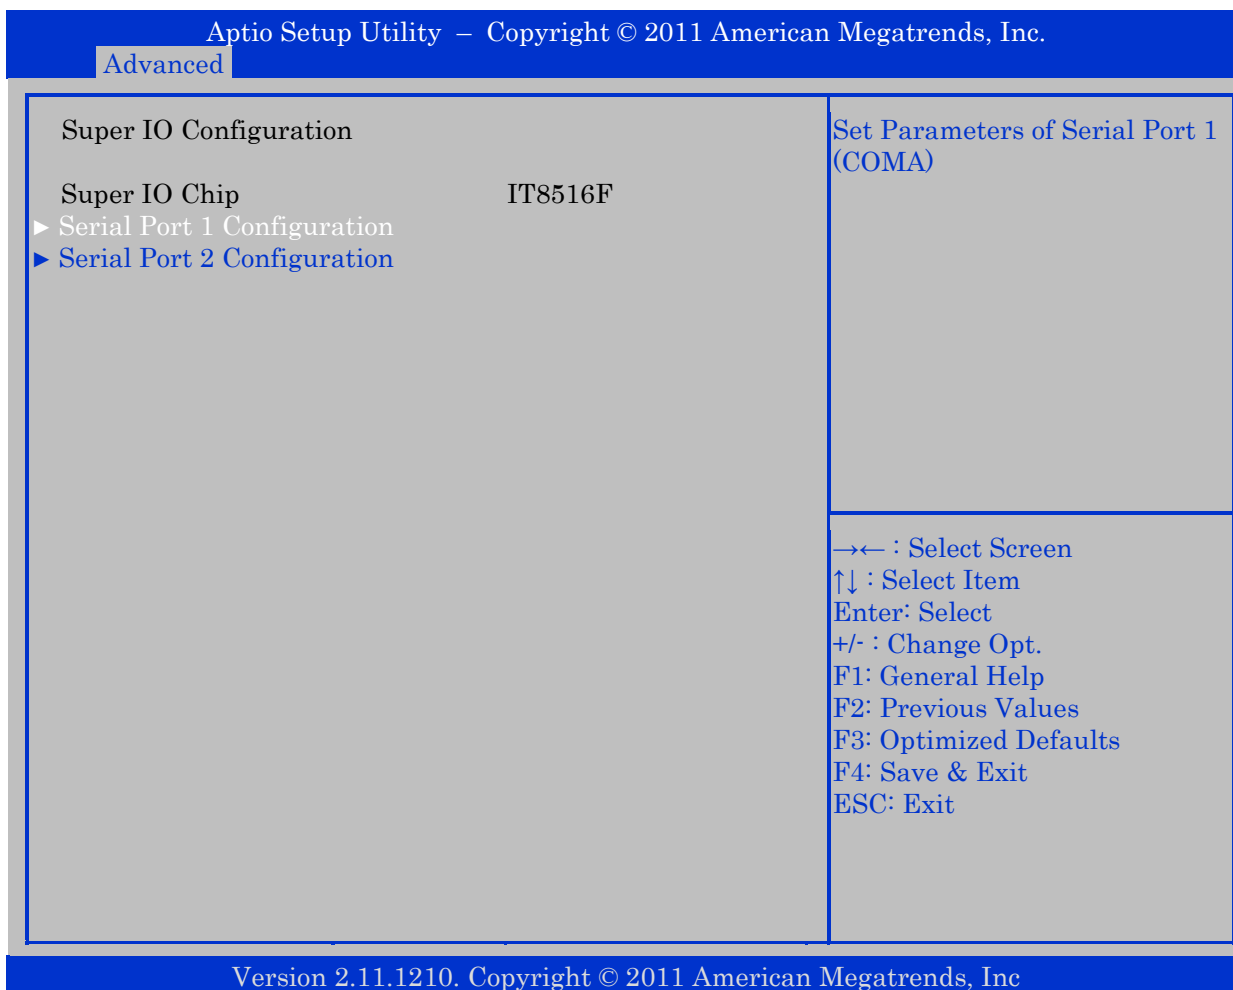

Advanced

<p>USB Configuration</p> <p>USB Devices: 2 Hubs</p> <p>Legacy USB Support [Enabled] EHCI Hand-off [Disabled]</p> <p>USB Hardware delays and time-outs:</p> <p>USB transfer time-out [20 sec] Device reset time-out [20 sec] Device power-up delay [Auto]</p>	<p>Enables Legacy USB support. AUTO option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications.</p>
	<p>→← : Select Screen ↑↓ : Select Item Enter: Select +/- : Change Opt. F1: General Help F2: Previous Values F3: Optimized Defaults F4: Save & Exit ESC: Exit</p>

Version 2.11.1210. Copyright © 2011 American Megatrends, Inc

Function	Selection	Description
Legacy USB Support	Enabled Disabled Auto	Enables Legacy USB support. AUTO option disables legacy support if no USB devices are connected. DISABLE option will keep USB devices available only for EFI applications.
EHCI Hand-off	Disabled Enabled	This is a workaround for OSES without EHCI hand-off support. The EHCI ownership change should be claimed by EHCI driver.
USB transfer time-out	1 sec 5 sec 10 sec 20 sec	The time-out value for Control, Bulk, and Interrupt transfers.
Device reset time-out	10 sec 20 sec 30 sec 40 sec	USB mass storage device Start Unit command time-out.
Device power-up delay	Auto Manual	Maximum time the device will take before it properly reports itself to the Host Controller. 'Auto' uses default value: for a Root port it is 100 ms, for a Hub port the delay is taken from Hub descriptor.

9.5.9 Advanced - Super IO Configuration (IT8516F)

Recorder Mode	[Disabled]	
Resolution 100x31	[Disabled]	
Legacy OS Redirection Resolution	[80x24]	
Version 2.11.1210. Copyright © 2011 American Megatrends, Inc		

Function	Selection	Description
Terminal Type	VT100 VT100+ VT-UTF8 ANSI	Emulation: ANSI: Extended ASCII char set. VT100: ASCII char set. VT100+: Extends VT100 to support color, function keys, etc. VT-UTF8: Uses UTF8 encoding to map Unicode chars onto 1 or more bytes.
Bits per second	9600 19200 38400 57600 115200	Select serial port transmission speed. The speed must be matched on the other side. Long or noisy lines may require lower speeds.
Data Bits	7, 8	Data Bits
Parity	None Even Odd Mark Space	A parity bit can be sent with the data bits to detect some transmission errors. Even: parity bit is 0 if the num of 1's in the data bits is even. Odd: parity bit is 0 if the num of 1's in the data bits is odd. Mark: parity bit is always 1. Space: parity bit is always 0. Mark/Space do not allow error detection.
Stop Bits	1 2	Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.
Flow Control	None Hardware RTS/CTS	Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signals.
Recorder Mode	Disabled Enabled	On this mode enabled only text will be send. This is to capture Terminal data.
Resolution 100x31	Disabled Enabled	Enables or disables extended terminal resolution.
Legacy OS Redirection Resolution	80x24 80x25	On Legacy OS, the Number of Rows and Columns supported redirection.

Function	Description
Save Changes and Exit	Exit system setup after saving the changes.
Discard Changes and Exit	Exit system setup without saving any changes.
Save Changes and Reset	Reset the system after saving the changes.
Discard Changes and Reset	Reset the system without saving any changes.
Save Changes	Save Changes done so far to any of the setup options.
Discard Changes	Discard Changes done so far to any of the setup options.
Restore Defaults	Restore/Load Default values for all the setup options.
Save as User Defaults	Save the Changes done so far as User Defaults.
Restore User Defaults	Restore the User Defaults to all the setup options.
(possible list of boot devices)	Selection table of bootable devices. When selected system will boot on selected device. (See note below)
Launch EFI Shell From filesystem device	Attempts to Launch EFI Shell application (Shellx64.efi) from one of the available filesystem devices.

Note: When pressing <F7> while booting it is possible manually to select boot device.

10 AMI BIOS Beep Codes

It is normal for Kontron AMI UEFI BIOS to generate some beeps after POST has passed successfully:

The first beep indicates that POST has successfully passed.

Then a number of beeps indicate the number of attached USB devices.

And finally a special long beep indicates that AMI boot is completed.

Note: The long beep starting as a normal beep but is changing to higher frequency.

If POST has found a problem, then the normal behaviour (described above) is changed:

Boot Block Beep Codes:

Number of Beeps	Description
1	Insert diskette in floppy drive A:
2	'AMIBOOT.ROM' file not found in root directory of diskette in A:
3	Base Memory error
4	Flash Programming successful
5	Floppy read error
6	Keyboard controller BAT command failed
7	No Flash EPROM detected
8	Floppy controller failure
9	Boot Block BIOS checksum error
10	Flash Erase error
11	Flash Program error
12	'AMIBOOT.ROM' file size error
13	BIOS ROM image mismatch (file layout does not match image present in flash device)

POST BIOS Beep Codes:

Number of Beeps	Description
1	Memory refresh timer error.
2	Parity error in base memory (first 64KB block)
3	Base memory read/write test error
4	Motherboard timer not operational
5	Processor error
6	8042 Gate A20 test error (cannot switch to protected mode)
7	General exception error (processor exception interrupt error)
8	Display memory error (system video adapter)
9	AMIBIOS ROM checksum error
10	CMOS shutdown register read/write error
11	Cache memory test failed

Troubleshooting POST BIOS Beep Codes:

Number of Beeps	Troubleshooting Action
1, 2 or 3	Reset the memory, or replace with known good modules.
4-7, 9-11	<p>Fatal error indicating a serious problem with the system. Consult your system manufacturer. Before declaring the motherboard beyond "all hope", eliminate the possibility of interference due to a malfunctioning add-in card. Remove all expansion cards, except the video adapter.</p> <ul style="list-style-type: none"> • If beep codes are generated when all other expansion cards are absent, consult your system manufacturer's technical support. • If beep codes are not generated when all other expansion cards are absent, one of the add-in cards is causing the malfunction. Insert the cards back into the system one at a time until the problem happens again. This will reveal the malfunctioning card.
8	If the system video adapter is an add-in card, replace or reset the video adapter. If the video adapter is an integrated part of the system board, the board may be faulty.

11 OS Setup

Use the Setup.exe files for all relevant drivers. The drivers can be found on KTQ67 Driver CD or they can be downloaded from the homepage <http://www.kontron.com/>
